FOREWORD

Groundwater is of fundamental importance to meet the rapidly expanding drinking, agricultural and industrial water requirement of the country. Periodic monitoring of the ground water regime is an essential prerequisite for effective planning, management and sustenance of quantity as well quality of this precious resource. To keep track of the changes in ground water regime, Central Ground Water Board monitors ground water level four times in a year, i.e. during May, August, November and January, through a network of groundwater monitoring wells scattered throughout the length and breadth of the country. The present report gives an overview of the status of ground water level monitored during the year 2023-24 by the officers and officials of Central Ground Water Board in the state of Madhya Pradesh. As on 31.03.2024, there are 1871 Ground Water monitoring (1178 dug wells and 434 piezometers) in the state. Out of 434 piezometers, in 391 piezometers Digital Water Level Recorder (DWLR) installed in which 4 times in a day ground water level is received.

Water samples are collected twice in a year during May and November and are subjected to detailed chemical analysis to monitor the changes in chemical quality of groundwater. The water level data are updated and stored in computer and subjected to analyses using the software. The ground water level data has been analyzed to know the ground waer condition in the entire state. The presents report deals with the cumulative action of the work done during the year 2023. During this year, the existing monioring wells were monitored during May 2023, August 2023, November 2023 and January 2024.

The ground water regime monitoring work is a joint endeavour of all the officers and officials of this region, and their contribution in this important activity is highly appreciated. Preparation of this report has been an arduous task which has been successfully completed by *Ms Lata Udsaiya, Scientist-C, Sh Sumanta Kumar Mohanta Scientist-C, Vaishnavi Parihar, Sc-B, Sh Pradip Roy, Sc-B*. I hope that the State Government and other user agencies would utilize the data incorporated in the report for proper planning of the ground water development and management activities in the state.

(A.K.Biswal)

EXECUTIVE SUMMERY

Central Ground Water Board, North Central Region, Bhopal monitors ground water level in the state of Madhya Pradesh through a network of 1871 ground water monitoring dug wells and piezometers, four times in a year in order to bring out the spatial and temporal changes in the ground water regime. This continuous monitoring provides a valuable tool to decipher the seasonal and long-term changes in ground water level and quality and in turn helps in managing the ground water resources in a more scientific and effective manner. The present report incorporates the overall behavior of the ground water regime including the quality aspects in the state of Madhya Pradesh on the basis of the detailed analyses of the field data collected from monitoring or observation wells during the year 2023-2024.

Total geographical area of Madhya Pradesh State is 3, 08,237 km². The state exhibits six distinct physiographic units namely the Malwa Plateau, the Satpura Range, the Vindhyan Range, the Mahakoshal Range, the Bundelkhand Region and the river valleys. There are six river basins in Madhya Pradesh which are Ganga Basin (Yamuna sub basin - Chambal sub-sub basin, Kunwari sub-sub basin, Jamni sub-sub basin, Betwa sub-sub basin, Dhasan sub-sub basin, Ken sub-sub basin, Paisuni and Waidhan sub-sub basin, Tons sub basin and Sone sub basin), Narmada Basin, Godavari Basin, Tapi Basin, Mahi Basin and Mahanadi Basin.

Central Ground Water Board, North Central Region, Bhopal has set up a network of monitoring wells spread over the state in different hydrogeological conditions, consisting of 1386 dug wells and 485 piezometers, which are being monitored four times in a year. In the 391 piezometers, Digital Water Level Recorder has been installed in which 4 times in a day received the ground water level data. The periods of monitoring are –20th to 30th May, 20th to 30th August, 1st to 10th November and 1st to 10th January. Water samples are being collected for analysis during the month of May.

The state has varied hydrogeological set-up due to which ground water potential differs from place to place. The area is underlain by various geological formations ranging in age from Archaean to Recent. Hard rock areas cover more than 80% of total land area of the state. These hard rock areas show wide variations and complexities in nature and composition of rocks, geological structures, geomorphological set up and hydrometeorological conditions. The crystalline rocks of Archaean age like granite, gneiss, granulite's, schist, quartzite and granitoids occupy about 14.7% of geographical area of the state. The basaltic rocks of Deccan lava flows are the predominant formations and occupy nearly 44.5% of total geographical area. The consolidated sedimentary rocks of Vindhyan Super Group and Mahakoshal (Cuddapah) Super Group of Proterozoic age occupy about 19.1% of total geographical area and the semi consolidated (Gondwana Formation) occupies about 6.7% area. Recent unconsolidated alluvial sediments occupy about 14.4% of total geographical area.

Rainfall is the sole source of natural recharge to ground water regime and rainfall pattern has an important impact on groundwater level in the phreatic aquifer. Rainfall in the state occurs during south-west monsoon season (mid June to September) and sometimes during winter (November to February). Most of the rainfall (more than 90%) occurs during the south-west monsoon season. Monsoon rainfall within $\pm 19\%$ of the normal monsoon rainfall is considered normal. Monsoon rainfall between 20 percent and 59 percent of the normal monsoon rainfall is considered excess and above 60 % is considered as large excess. Monsoon rainfall less than - 20% and more than -59% of the normal monsoon rainfall is considered deficit and if the monsoon rainfall is lesser than -60% of the normal monsoon rainfall, it is considered large deficient. The North-Eastern districts like Rewa, Sidhi and Satna and Central regions of Ashoknagar and Guna received rainfall in deficit. Maximum departure from normal rainfall is observed in Satna District (-37%). The Districts of Khandwa, Burhanpur, Seoni, Narsinghpur and Niwari received excess rainfall than normal in the year 2023.

The groundwater level monitored in the May is the pre-monsoon water level and the water level as it stands at the end of the ground water year after all the inputs and outputs have taken place. It is the resultant ultimate/deepest water level. Analysis of depth to water level data of 1268 wells shows water levels vary between 0.26 m bgl (Narsinghpur district) to 54.97 m bgl (Gwalior district). Water level of less than 2 m bgl is recorded in 2.21% of wells, between 2 to 5 m bgl in 21.06% of wells, between 5 to 10 m bgl in 48.66% of wells, between 10 to 20 m bgl in 24.76 % of wells, between 20-40 m bgl in 2.84% of wells and water level more than 40 mbgl is observed in 0.47% of wells.

The groundwater level monitored in November is the post-monsoon water level and the water level as it stands after the major portion of rainfall recharge has taken place. An analysis of depth to water level data from 1,434 wells in Madhya Pradesh reveals a range from 0.1 m to 45.27 m below ground level (bgl). Despite normal rainfall this year, many districts are experiencing deficits. Shallow water levels (up to 2 m bgl) are notably present in Sehore, Chhindwara, Mandla, Dindori, Damoh, and Vidisha, with 11.63% of wells recording levels below 2 m. Approximately 44.45% of wells show levels between 2-5 m bgl, while 33.58% fall within the 5-10 m bgl range. Deeper levels (10-20 m bgl) are observed in the northern part and isolated areas of Singrauli, Satna, and Rewa, affecting about 9.40% of wells. Finally, only 0.83% of wells report water levels between 20-40 m bgl, primarily in Morena, Burhanpur, Gwalior, and Sheopur districts.

Ground water is a dynamic system. The ground water level or head is subject to change both due to natural and man-made causes. Comparison of November 2022 water level with that of May 2023 shows a general rise in 88.63 % of the wells. Such a rise is a normal phenomenon in the hydrological cycle since the monsoon rainfall forms the sole source of natural recharge to ground water regime in the state. Rise in the order of 0 to 2 m is seen in 34.39% of wells in northern and south western part of state. About 32.41 % of the wells have shown a rise of 2-4 m and are seen in almost eastern part of the district and in some part of northern and south western part of district. Significant rise of > 4 m is found in 33.2% of wells in entire parts of the state. About 11.37 % of the wells in Madhya Pradesh shows the decline in water level in the state amongst the well showing Water Level decline, about 65.89 % of wells show a marginal decline in water level upto 2 m, 20.16% wells more than 2 m and significant decline of > 4 m shows in 13.95% of wells.

Long term behavior of water level of the phreatic zone has been analyzed by comparing the average water level data of last ten years with the current water level of different measurements during the year. The Ground Water level of May 2023 was compared with the 10 years May (2013-2022). It is observed that 63.75% of the wells show rise and about 36.25% of wells show decline in water levels in the state. 744 wells have register rise in water level. The water level rise of less than 2 m is recorded in 66.80% wells, 2 to 4 m in 19.9% wells and more than 4 m in 13.3% of the wells. Water level rise of 2 to 4 m is observed mainly in Sheopur, Vidisha, Barwani, Seoni, Khandwa District in 19.9% of wells and rise of more than 4 m is significantly observed in Sheopur, Bhind, Tikamgarh, Neemuch, Mandsaur, Khandwa, Betul in 13.3% of wells.

Ground water levels trend map of pre-monsoon period (May 2014 – May 2023) in Madhya Pradesh state shows a general rising trend and declining trend of less than 0.3 m/year of ground water levels during the past decade in most of the districts of the state. The rising trend more than 0.3 m/year has been observed in a small pocket in Barwani, Khargone, Dhar, Mandsaur, Neemuch, Balaghat, Damoh, Seoni, Rewa and etc. Declining trend at a rate less than 0.3 m/year is observed in patches in many parts of the state and has been observed in the districts mainly in Guna and Rajgarh districts. The declining trend of pre-monsoon water levels reflects the ground water developmental activities in an area, whereas the rising trend indicates that either the developmental activities have reduced, or, recharge due to sources other than the rainfall, such as applied irrigation has increased.

Like pre-monsoon ground water levels trend, post-monsoon trend (Nov 2014 to Nov 2023) shows that there is a general rising trend as well as declining trend of less than 0.3 m/year of ground water levels during the past decade in most of the districts of the state. Post monsoon depth to water level rising trend is most prominent over western part of Madhya Pradesh as compared to eastern part. Rising ground water level trend in the range of 0.3 to 0.6 m/yr is observed in few place only. Depth to water level declining trend less than 0.3 m/yr is more prominent towards east and in the west in Alirajpur, Barwani, Dhar, Khargone, Khandwa, Burhanpur and Jhabua. The declining trend in post-monsoon water levels suggests that a part of the aquifer is being dewatered every year, either due to deficient rainfall or due to developmental activities. The rising post- monsoon trend, on the other hand, shows that additional water is being stored in the aquifer, due either to increased rainfall or due to seepage through applied irrigation.

LIST OF ANNEXTURES

Annexure I- District-wise Depth to water level and Distribution of Percentage of wells (Unconfined) of Madhya Pradesh for the period of May - 2023	58
Annexure- II District-wise Depth to water level and Distribution of Percentage of wells of Madhya Pradesh for the period of Aug - 2023	60
Annexure- III District-wise Depth to water level and Distribution of Percentage of wells of Madhya Pradesh for the period of Nov – 2023	62
Annexure IV- District-wise Depth to water level and Distribution of Percentage of wells of Madhya Pradesh for the period of Jan – 2024	64
Annexure-V District Wise Annual Fluctuation and Frequency Distribution from May 2022 to May 2023 (Madhya Pradesh State)	67
Annexure-VI District Wise Annual Fluctuation and Frequency Distribution from August 2022 to August 2023 (Madhya Pradesh State)	70
Annexure-VII District Wise Annual Fluctuation and Frequency Distribution from Nov 2022 to Nov 2023 (Madhya Pradesh State)	72
Annexure-VIII District Wise Annual Fluctuation and Frequency Distribution from January 2023 to January 2024 (Madhya Pradesh State)	74
Annexure- IX District Wise- Seasonal Fluctuation and Frequency Distribution from Different Ranges from 2023/May to 2023/Aug of Madhya Pradesh	77
Annexure- X District Wise- Seasonal Fluctuation and Frequency Distribution from Different Ranges from 2023/May to 2023/Nov, Madhya Pradesh	79
Annexure- XI District Wise- Seasonal Fluctuation and Frequency Distribution from Different Ranges from 2023/May to 2024/Jan, Madhya Pradesh	82
Annexure-XII District Wise - Fluctuation of Water Level with Mean and Selected Period (10 Years Mean: 2013 May-2022 May)-2023 May	83
Annexure-XIII District Wise - Fluctuation of Water Level with Mean and Selected Period (10 Years Mean: 2013 Aug-2022 Aug)-2023 Aug	86
Annexure-XIV District Wise - Fluctuation of Water Level with Mean and Selected Period (10 Years Mean: November 2013 - November 2022) - November 2023)	89
Annexure-XV District Wise - Fluctuation of Water Level with Mean and Selected Period (10 Years Mean: 2014 Jan-2023 Jan)-2024 Jan	91

Annexure-XVI District-wise Depth to water level and Distribution of Percentage of wells (semi-confined/confined) of Madhya Pradesh for the period of May – 2023	92
Annexure-XVII District-wise Depth to water level and Distribution of Percentage of wells (semi-confined/confined) of Madhya Pradesh for the period of Aug – 2023	94
Annexure-XVIII District-wise Depth to water level and Distribution of Percentage of wells (semi-confined/confined) of Madhya Pradesh for the period of Nov – 2023	96
Annexure-XIX District-wise Depth to water level and Distribution of Percentage of wells (semi-confined/confined) of Madhya Pradesh for the period of Jan – 2024	98
Annexure-XX Water Level Data of the Monitoring wells for May 2023	101
Annexure-XXI Water Level Data of the Monitoring wells for Aug 2023	151
Annexure-XXII Water Level Data of the Monitoring wells for Nov 2023	218
Annexure-XXIII Water Level Data of the Monitoring wells for Jan 2024	291

1.0 INTRODUCTION

Madhya Pradesh is located in the central part of India and is a land-locked state, bordered on the west by Gujarat, on the northwest by Rajasthan, on the northeast by Uttar Pradesh, on the east by Chhattisgarh and on the south by Maharashtra State. It has a geographical area of 3,08,252 km² and is situated between north latitudes 21° 04' and 26° 54' and east longitudes 74° 00' and 82° 50'. There are 52 districts and 313 community development blocks in Madhya Pradesh. The population of state as per census 2011 is 7, 25, 97, 565 with a population density of 236 persons per km² area. Out of total population, 75% lives in the villages and their main occupation is agriculture. The important urban areas in the state are Bhopal, Indore, Jabalpur, Ujjain and Gwalior. Dhupgarh in Pachmarhi is the highest point in the state. Madhya Pradesh comprises several linguistically and culturally distinct regions, of which the major regions are:

Malwa Plateau Region is located in the northwest of the state and north of the Vindhya Range, with its distinct language and culture. Indore is the major city of the region, while Ujjain is a town of historical importance. Bhopal, the capital city lies on the extension of Malwa Region and on the edge of Bundelkhand Region.

Nimar Region is located in the western portion of the Narmada River valley, lying south of the Vindhyas in the southwest portion of the state. Khandwa, Khargone, Burhanpur and Barwani are the major district of the Nimar Region.

Bundelkhand is a region of rolling hills and fertile valleys in the northern part of the state, which slopes down toward the Indo-Gangetic plain to the north. Gwalior is an historic center of the region. This region encompasses Gwalior, Sagar, Damoh, Panna, Chhatarpur and Tikamgarh Districts.

Chambal region is located in the north-western parts of the state. The climate is harsh, and the area is known for murderous pirates who were active in hundreds in the late 1900s. This region is comprised of Sheopur, Morena and Bhind Districts.

Baghelkhand is a hilly region in the northeast parts of the state, which includes the eastern end of the Vindhya Range. Satna, Rewa and Sidhi Districts lie in this region.

Mahakoshal (Mahakaushal) is the southeastern portion of the state, which includes the eastern end of the Narmada River valley and the Eastern Satpuras. Jabalpur is the most important city in the region. Katni and Jabalpur Districts lie in this region.

Central Vindhyan and Satpura Region is occupying most parts of the central Narmada River valley.

Hoshangabad, Harda and Narsimhapur Districts lies in this region.

Agriculture is the main stay of the people of Madhya Pradesh State. Water is essential for irrigation purposes, but its indiscriminate use can lead not only to shortages, but also to the deterioration of crop yields and soils. Ground water resource of a region is one of the building blocks for balanced economic development of the area, especially in an agriculture- based society. Dependence on ground water for irrigation and increasing water requirements in urban areas in Madhya Pradesh has necessitated judicious and planned uses of groundwater resources in order to reach sustainability. For proper planning and management of ground water development in a judicious and socio-economically equitable manner, assessment of ground water scenario is one of the most important prerequisites.

Central Ground Water Board (CGWB) monitors ground water levels all over the country fourtimes in a year in order to bring out the spatial and temporal changes in the ground water regime. This continuous monitoring provides a valuable tool to decipher the annual, seasonal and long-term changes in ground water regime, and in turn helps in managing the ground water resources in a scientific manner.

The North Central Region office of CGWB, based at Bhopal, monitors the ground water wells spreaded all over the state. As on March 2023, 1612 monitoring wells are located in 52 districts of Madhya Pradesh including dug wells (1178), Observatory Wells (130) and piezometers (304). Water samples are collected from these wells during May to identify groundwater quality issues in each area. District-wise distribution of Ground Water Monitoring Wells in Madhya Pradesh during 2023 is given in Table 1-1. The locations of these monitoring wells are shown in Figure 1-1. All monitoring wells are monitored four times in a given hydrological year in the months of August (20st to 30th day), November (postmonsoon) (1st to 10th day), January (1st to 10th day) and May (premonsoon) (20th to 30th day). The long-term data generated during these monitoring seasons are important for computation, comparison and analysis of ground water utilization and its availability.

Reports on the status of ground water levels are produced within one month from each monitoring period and contain analysis of ground water levels in that particular season, and compare these water levels with those of the same season of previous year, premonsoon period and previous seasons of the same hydrological year and decadal mean (10 years of average) of the same season.

Table 1.1 District-Wise Distribution of Ground Water Monitoring Wells in Madhya Pradesh State

Fig: 1.1 Location Map of Ground Water Monitoring Wells in Madhya Pradesh State

1.1 PHYSIOGRAPHY

The State of Madhya Pradesh exhibits six distinct physiographic units as follows:

The Malwa Plateau

The Satpura Range

The indhyan Range

The Mahakoshal Range

The Bundelkhand Region

The River valleys

The Malwa Plateau marks the northern span of the Deccan Plateau and this region forms a part of the vast Deccan Plateau of Central India. The hill ranges run across the plateau. The Satpura Range located in the southern part of the State is E-W trending. It has an average elevation of 600 m amsl and highest elevation of 1350 m amsl. The Vindhyan range occupies in the northern and central part of the region and has ENE- WSW trend. The Mahakoshal Range also has a similar trend. The Vindhyan Range extends into the Malwa Plateau and Bundelkhand Region. The Vindhyan Range and Mahakoshal Range are separated from the Satpura Range by the Narmada River and vast tract of its basin area. The river valleys, other than the Narmada alluvial plain and Chambal alluvial plain, are very limited and form narrow belts along the rivers.

1.2 DRAINAGE

Madhya Pradesh State represents great river basins and the watershed of a number of rivers. Catchments of many rivers of India lie in Madhya Pradesh. There are six river basins in Madhya Pradesh namely 1 Ganga Basin (1.1 Yamuna sub basin - Chambal sub-sub basin, Kunwarisindh sub-sub basin, Jamni sub-sub basin, Betwa sub-sub basin, Dhasan sub-sub basin, Ken sub-sub basin, Paisuni and Baidhan sub subbasin 1.2 Tons sub basin, 1.3 Sone sub basin), 2 Narmada Basin, 3 Godavari Basin, 4 Tapti Basin, 5 Mahi Basin and 6 Mahanadi Basin. As Madhya Pradesh is located in the center of India, most of the rivers are interstate rivers. The rivers namely, Chambal, Sindh, Betwa, Ken flows northward and meet with Yamuna, whereas the Sone River falls directly into Ganga. Narmada, Tapti and Mahi Rivers flow westward and meet Arabian Sea whereas Wainganga and Pench Rivers meet Godavari in the south. The Narmada (originating from Amarkantak) and Tapti (originating from Multai in Betul District) Rivers and their basins divide the state in two, with the northern part draining largely into the Ganga basin and the southern part into the Godavari and Mahanadi systems. The Vindhyas form the southern boundary of the Ganga basin, with the western part of the Ganga basin draining into the Yamuna and the eastern part directly into the Ganga itself. All the rivers, which drain into the Ganga, flow from south to north, with the Chambal, Kshipra, Kalisindh, Parbati, Kuno, Sind, Betwa, Dhasan and Ken Rivers being the main tributaries of the Yamuna. The land drained by these rivers is agriculturally rich, with the natural vegetation largely consisting of grass and dry deciduous forest types. The eastern part of the Ganga basin consists of the Son, the Tons and the Rihand Rivers, with the Son being the major tributary. This is also the junction

point of the Satpura and the Vindhya Ranges, with the Maikal and Kaimur Hills being the fulcrum. The forests here are much richer than the thorn forests of the northwestern part of Madhya Pradesh. The Son River is of great significance in that it is the largest tributary going into the Ganga on the south bank and arising out of the hills of Madhya Pradesh rather than from the Himalayas. This river and its tributaries contribute the bulk of the monsoon flow into Ganga, because the north bank tributaries are all snow fed.

The major tributary of the Ganga, the Son River, arises in one of the most important watersheds in India, the Maikal hills around Amarkantak. Three of the great rivers of India, Narmada, Mahanadi and Son, are given birth to by these hills. This is also one of the few ranges in the state having a north south configuration. The Mahanadi itself, together with its tributaries such as Hasdeo, Mand and Kharun flows southeast into Chhattisgarh and converts that state into a green rice bowl. The upper Mahanadi catchment contains some of the finest forests in the state, ranging from mixed deciduous to teak, bamboo and sal. Just as the Mahanadi flows east from the Maikal hills and the Son flows north, the mighty Narmada charts a westerly course from these very hills. The Narmada flows through a rift valley, with the Vindhyas marching along its northern bank and the Satpuras along the southern. Its tributaries include Banjar, Tawa, Machna, Denwa and Sonbhadra Rivers. Taken in combination with its parallel sister river, the Tapi, which also flows through a rift valley, the Narmada - Tapi systems carry and enormous volume of water and provide drainage for almost a quarter of the land area of Madhya Pradesh.

The Satpuras, in the Gawliar and Mahadeo hills, also contain a watershed, which is south facing. The Indrawati, Wainganga, Wardha, Pench, Kanhan and Penganga Rivers, discharge an enormous volume of water into the Godavari system. The Godavari is the lifeline of Andhra Pradesh, but the water which feeds it is a gift of the central India watershed.

1.3 HYDROGEOLOGY

The state of Madhya Pradesh has varied hydrogeological characteristics due to which ground water potential differs from place to place. The area is underlain by various geological formations ranging in age from the Archaean to the Recent. Hard rock areas cover more than 80% of total land area of the state. These hard-rock areas show wide variations and complexities in nature and composition of rocks, geological structures, geomorphological set up and

hydrometeorological conditions. The crystalline rocks of Archaean age like granite, gneiss, granulites, schist, quartzite and granitoids occupy about 14.7% of geographical area of the State. The basaltic rocks of Deccan lava flows are the predominant formations and occupy nearly 44.5% of total geographical area. The consolidated sedimentary rocks of Vindhyan Super Group and Mahakoshal (Cuddapah) Super Group of Proterozoic age occupy about 19.1% of total geographical area and the semi consolidated (Gondwana Formation) occupies about 6.7%. Recent unconsolidated alluvial sediments occupy about 14.4% of total geographical area. Hydrogeological units of Madhya Pradesh State are given in Table 1-2 and Hydrogeological map of Madhya Pradesh State has been given in **Figure 1-2a and Figure 1-2b.**

Archeans

Archeans comprise of old metamorphics, granites, gneisses and schists. They are hard and compact formations with low primary permeability, forming poor aquifers. Ground water occurs in these only in the weathered mantle and underlying fractured zone. Dug wells in this formation have depths of 5-30 m with water levels between 3-17 mbgl. Where thickness of aquifer is considerable, specific capacity ranges from 20-200 lpm/m of draw down. Hydraulic conductivity is generally less than 1 m/d and specific yield less than 5%. The yield of open wells ranges between 40-135 m³/d.

Vindhyan

Vindhyan Group of rocks comprise of sandstone, shale and limestone. The sandstone and shale are hard and compact and form poor aquifers. Ground water occurs in these in the weathered mantle and fractured zone or bedding plane fissures. The limestone is different in its hydrogeological properties having large solution cavities, which give rise to immense secondary permeability. The wells in limestone formations yield 100-500 m³/day for less than 5m draw down. Specific capacity ranges from 100-300 lpm/m of draw down, hydraulic conductivity varies between 5-15 m/d and specific yield ranges from 5- 15% in good karstic zones.

Gondwanas

The Gondwanas are sedimentary formations rich in granular zones and form good aquifers. They support both dug wells and tubewells, capable of yielding 100-500 m³/d for the drawdown of 6-10 m. the specific capacity ranges between 75-250 lpm/m of drawdown,

hydraulic conductivity varies between 10-25 m/d and specific yield is from 10-15%. However, the clayey and silty formations (shales/claystone/siltstone) of Dewas District are poor aquifers.

Infra Trappeans

The Bagh and Lameta beds and Nimar Sandstone are also sedimentary formations but have a limited extent and poor to moderate permeability. The limestone and calcareous clays when karstified form productive aquifers. The coralline limestone, the marls and nodular limestone are hard and compact having poor permeability. The Nimar sandstone has intergranular porosity, joints, fracture, bedding planes, which give moderate scope for ground water movement. The depth of wells varies from 3 to 13 m and depth to water level between 2 to 12 mbgl.

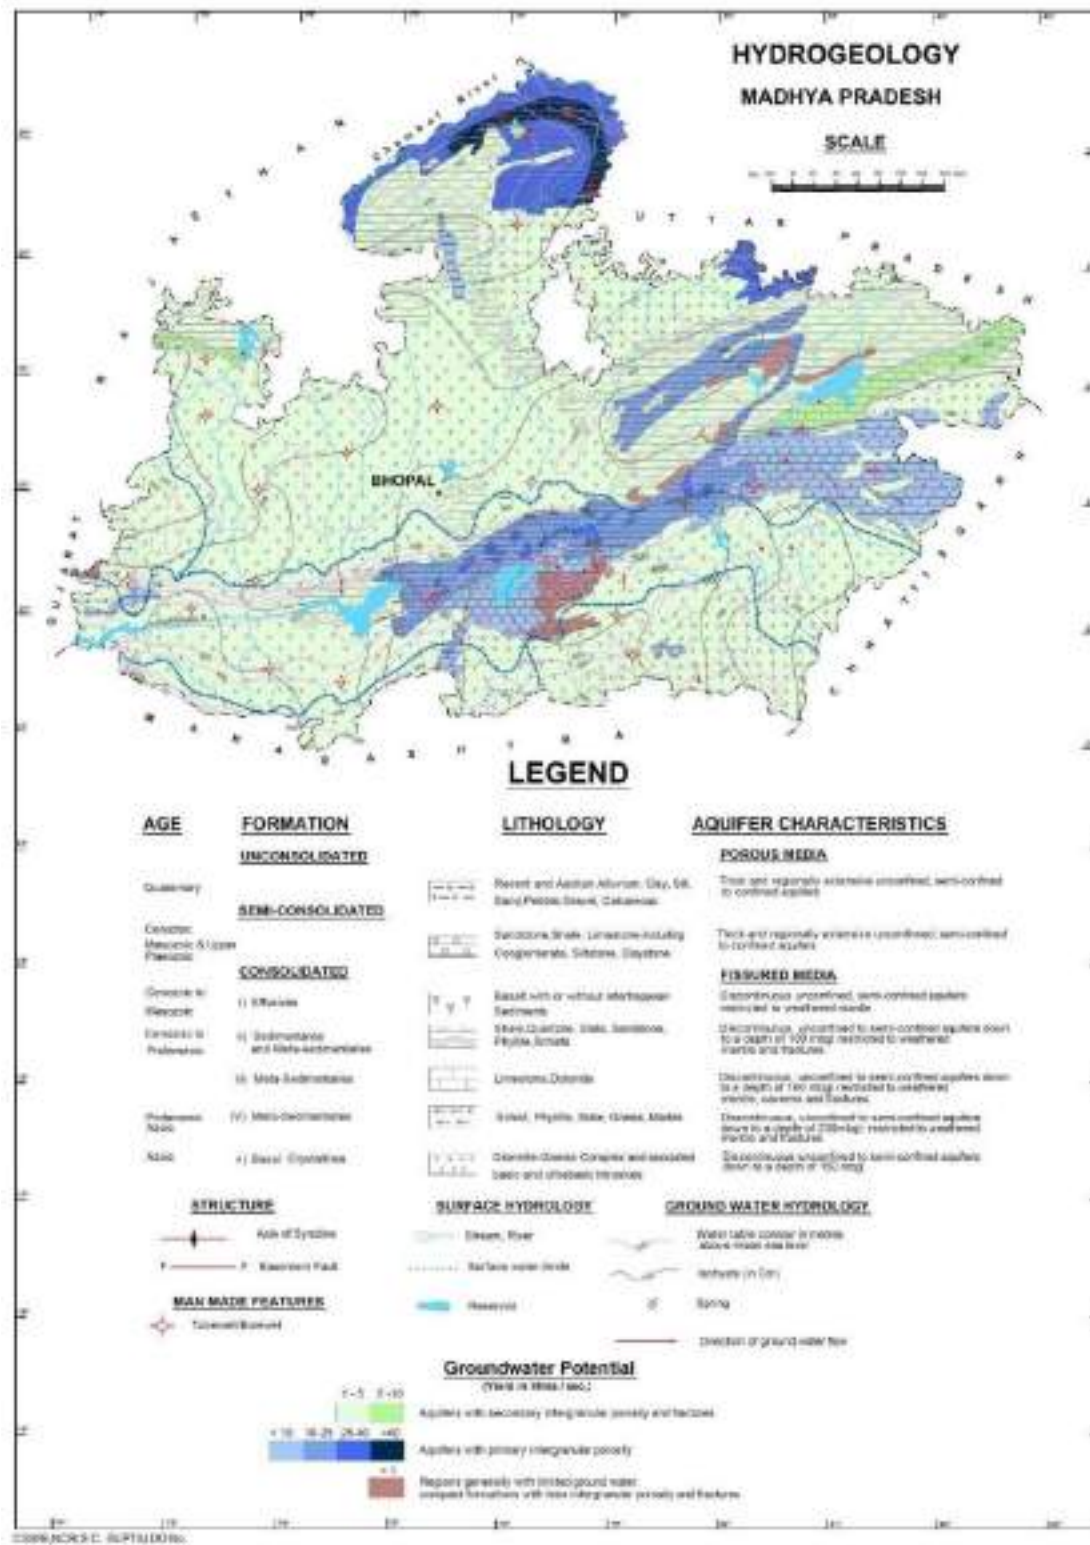

Deccan Traps

These form the most important aquifers in the region. The weathered, fractured, jointed and vesicular units of basalts form moderate to good aquifers. These formations have highly variable yields ranging from 10 to 750 m³/d. Dugwells range in depth from 4 to 20 m with water levels varying between 2 and 14 mbgl. The specific capacity ranges from 50 to 150 lpm/m of drawdown, hydraulic conductivity varies between 5 and 15 m/d and the specific yield is 5-10%. The Deccan Traps formations can be tapped by dug-cum-bore and drilled wells. It is observed that the yield increases by 5-10 times when 10-15 m bores extending down to the lower vesicular zone are drilled at the base of dugwells. Yields of 400-600 m³/d can be obtained in this way. In some areas the control of doleritic dykes on occurrence of ground water was observed. Wells located on the upstream side of these dykes gave better yields. Also wells located on tectonic lineaments gave better yields.

Alluvium

It comprises of unconsolidated gravel, sand, silt, clay in various proportions and has primary intergranular porosity and permeability. Hence it is the most promising formation for ground water development. The thickness of alluvium varies from 10 to 318 m with aquifer thickness from 10 to 160 m being more in the Ganga basin than in the Narmada basin. The depth to water ranges from 5 to 30 mbgl. The transmissivity is high in the Ganga basin reached up to 300 m²/d. In the Narmada basin transmissivity ranges between 83-283 m²/d. the yields vary from 30 to 50 m³/hr in the shallow wells and 30-200 m³/hr for deep wells in the Ganga basin. In the Narmada basin the yields are of the order of 15-30 m³/hr in the phreatic zone and 70- 200 m³/hr in the deeper zone. In the Wainganga sub basin, the wells yield 60-600 m³/d. In the

Tapi basin, the yields are 25-95 m³/d.

Fig: 1.2 Hydrogeological Map of Madhya Pradesh

Table 1.2 Hydrogeological Units in Madhya Pradesh, their Potential and Ground Water Scenario

Geological Age	Group	Rock Formation	Surface Exposure Area (Approx.)	Occurrence and Hydrogeological Characters
Pleistocene to Recent	Alluvial plains (older and Newer Alluvium)	Unconsolidated clays and silts, gravels and sands of different mix. Lenses of Peat and organic matter carbonate and siliceous concretions (Kankars)	38000 Sq.Km.	Occur widespread in Bhind (Chambal basin), Hoshangabad and Narsimhapur districts (Narmada basin) and also in Sheopur, Morena, Datia, Chhatarpur, Jabalpur, Katni, Khandwa, Burhanpur, Raisen, Sidhi and Balaghat Districts (leaky confined) or confined. and along rivers in some other districts. Form very potential ground water reservoirs with a thick sequence of sandy aquifers down to great depths (>300 m.bgl). The aquifers are unconfined, semi- confined
Paleozoic to Cretaceous	Deccan Trap	Basalts	143300 Sq.Km.	Occupy the Malwa Plateau covering Nimuch, Mandsaur, Indore, Dhar, Ratlam, Shajapur, Sagar, Rajgarh, Sehore, Badwani, Khargone, Khandwa and Burhanpur Districts and parts of Jhabua, Raisen, Guna, Ashoknagar, Vidisha, Bhopal, Sehore, Betul, Jabalpur, Katni, Hoshangabad, Harda, Narsimhapur, Chhindwara, Seoni, Dindori, Mandla, Shahdol and Anuppur Districts.
	Bagh and Lameta Groups	Sandstones, cherty limestones	8500 Sq.Km	Infra Trappean formation of Bagh & Lameta occurs in Dhar, Jhabua & Jabalpur Districts and small patches in Sagar, Hoshangabad and Narsimhapur Districts. Weathered, Fractured and vesicular basaltic layers of Traps, inter- trappeans and infratrappeans form productive unconfined hallow aquifers and leaky confined/confined deeper aquifers and yield upto 5 lps. (Infra trappeans are less productive). Storativity 1 to 4% Hydraulic conductivity 5-15 m/day.
	Gondwana Super Group. Jabalpur, Mahadeva, Panchet Formation Raniganj, Barakarsand Talchir Groups	Boulder beds Sandstones, shales, clay s, limestone, coal seams	28000 Sq.Km.	Occur in Betul, Chhindwara, Narsimhapur, Hoshangabad, Jabalpur, Katni, Sidhi, Umaria, Shahdol and Anuppur Districts. Possess moderate primary porosity. Groundwater occurs under phreatic as well as semi-confined to confined conditions. Free flowing conditions with free flow discharge of 150 to 200 lpm have been recorded in North- eastern part of Jabalpur District.

Geological Age	Group	Rock Formation	Surface Exposure Area (Approx.)	Occurrence and Hydrogeological Characters
Precambrian (Proteozoic)	Vindhyan Super Group. Bhandar, Rewa, Kaimur and Semri Groups. Mahakoshal (Cuddappah) Super Group Bijawar and Gwalior Groups.	Shales, Sandstones, limestones	58700 Sq.Km.	Occur in Gwalior, Morena, Sheopur, Shivpuri, Guna, Ashoknagar, Rewa, Panna, Satna, Jabalpur, Katni, Damoh, Sagar, Chhatarpur, Raisen, Bhopal, Vidisha, Nimuch, Mandsaur and Dewas Districts. Generally, devoid of any primary porosity. Weathering and denudation, structurally weak planes and fractures impart porosity and permeability in the rock mass. Solution cavities (Cavernous) in carbonate rocks, at places give rise to large groundwater storage/circulation. Sp. Yield value of unconfined aquifer is generally low (0.2% to 3%). Hydraulic conductivity varies widely depending upon fracture incidence (2 to 10 m/day.)
Archaean	Older Metamorphics Sausar, Sakoli and Chilpi Groups. & Bundelkhand Granites.	Granitoid Gneiss schists, gneisses, quartzites and granites	31500 Sq.Km.	Occurs in Seoni, Balaghat, Shahdol, Anuppur, Mandla, Dindori, Sidhi, Rewa, Panna, Datia, Tikamgarh, Gwalior, Chhatarpur, Jabalpur, Katni, Jhabua and Shivpuri Districts, as also parts of Chhindwara, Harda, Hoshangabad, Narsimhapur and Dewas, Districts. Do not possess primary porosity. Weathering, fracturing, jointing in parts secondary porosity. Ground water mostly occurs under phreatic conditions and at some places also under confined/semi confined conditions.

2.0 HYDROMETEOROLOGY

2.1 MONSOON AND POST MONSOON RAINFALL DISTRIBUTION (JAN- JUN) 2023

District-wise monthly and annual rainfall of both normal and actual of the year 2023 is compiled from daily and weekly weather reports of India Meteorological Department (IMD) and presented in Table-2.1(a) and 2.1 (b). The salient features are given below.

Table-2.1 (a) District Wise monthly Rainfall data of Madhya Pradesh

- The normal annual monsoon rainfall of the state is **949.5** mm of which SW monsoon (June-September) contributes **90.6%**, NE monsoon (Oct-Dec) contributes **5%**, winter contributes **2.6%** and summer contributes **1.8 %** of the rainfall.
- During the year 2023, state received **similar to normal rainfall** (945.5 mm).
- The North-Eastern districts like Rewa, Sidhi and Satna and Central regions of Ashoknagar and Guna received rainfall in deficit. Maximum departure from normal rainfall is observed in Satna District (-37%).
- The Districts of Khandwa, Burhanpur, Seoni, Narsinghpur and Niwari received excess rainfall than normal in the year 2023.
- Departure of annual rainfall 2022 from normal is depicted in **(Table-2.2)** and Rainfall category of the state is shown in the **Figure 2.1**.

3.0 ANALYSIS OF GROUND WATER LEVELS

3.1 DEPTH TO WATER LEVELS

During the water year, the existing monitoring wells were monitored four times, i.e., during May 2023, August 2023, November 2023 and January 2024. With the field data, maps were prepared for visual interpretation of the behaviors of the ground water levels. Depth to ground water levels were demarcated into various zones in the ranges of less than 2 m, 2-5 m, 5-10 m, 10-20 m, 20-40 m and more than 40 m. The description of the depth to water level during different monitoring seasons is as follows:

3.1.1 DEPTH TO WATER LEVEL MAY 2023

Analysis of depth to water level data of 1268 wells shows water levels vary between 0.26 m bgl (Narsinghpur district) to 54.97 m bgl (Gwalior district). Water level of less than 2 m bgl is recorded in 2.21% of wells, between 2 to 5 m bgl in 21.06% of wells, between 5 to 10 m bgl in 48.66% of wells, between 10 to 20 m bgl in 24.76 % of wells, between 20-40 m bgl in 2.84% of wells and water level more than 40 m bgl is observed in 0.47% of wells. **(Fig 3.1) and (Fig 3.2)**

Shallow water level of less than 2 m bgl as isolated patches in parts of Dindori, Seoni, Mandasaur, Balaghat districts covering only an area of 2% of the State. Water level of 2 to 5 m bgl is observed in parts of Dindori, Annupur, Balaghat, Seoni, Narsinghpur, Chhindwara, Betul, Khandwa, Khargone, Jhabua, Shivpuri, Gwalior, Morena, Tikamgarh districts covering an area of 21% of the State. 49% area of the state is covered by depth to water level of 5 to 10 m bgl is observed throughout the state with significant area in Sheopur, Shivpuri, Ashoknagar, Guna, Tikamgarh, Chhatarpur, Damoh, Sagar, Panna, Rewa, Satna, Shadol, Barwani, Khargone, Khandwa, Betul, Sidhi, Singrauli districts. Water level of 10 to 20 m bgl is covered in 25% of the State area majorly in the northern and western part of the district. Water levels of 20 to 40 m bgl cover 2.8% area of the state covering mainly Ratlam, Dewas, Dhar, Burhanpur, Narsinghpur, Rajgarh, Gwalior, Morena, Bhind, Datia districts. Water levels greater than 40 m bgl cover 0.2% of the state and is mainly covering Gwalior district. **(Annexure-I).**

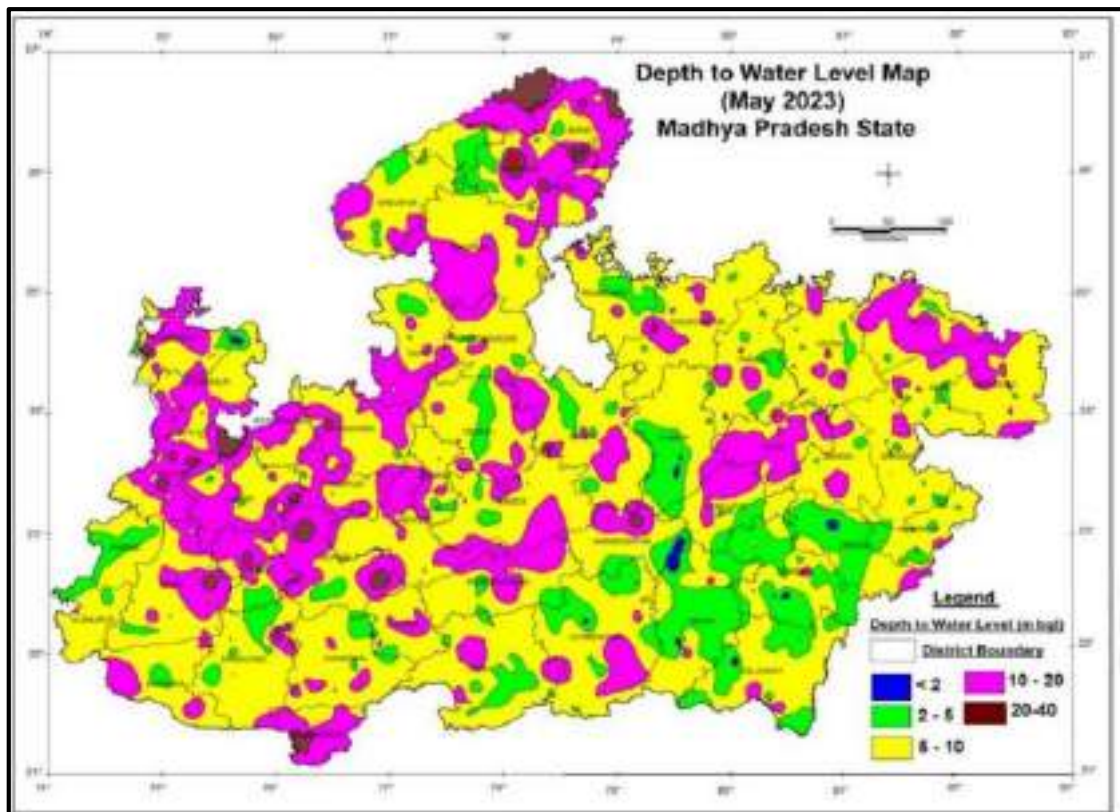

Fig 3.1 Showing the Depth to Water Level Map (May 2023) of Madhya Pradesh May 2023

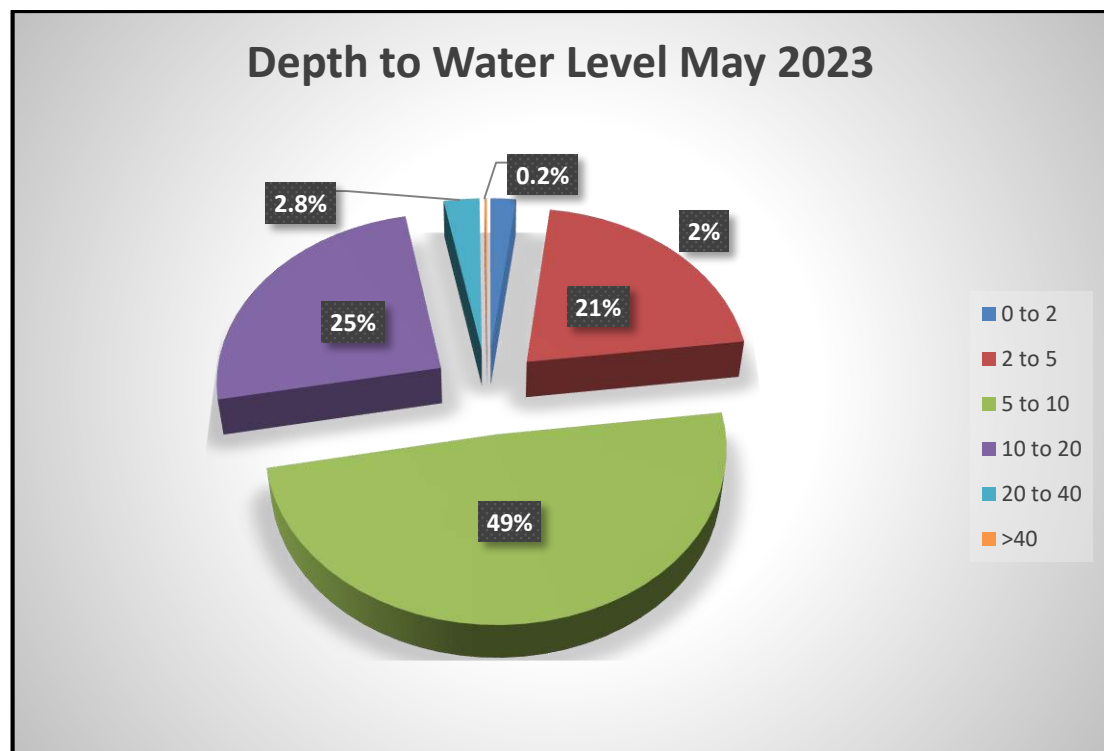

Fig: 3.2 Pie Chart showing Depth to Water Level May 2023

3.1.2 DEPTH TO WATER LEVEL AUGUST 2023

Analysis of depth to water level data shows water levels vary between 0 m bgl (Ujjain and Indore District) to 19.98 m bgl (Sidhi district). Water level of less than 2 m bgl is recorded in 28.40 % of wells, between 2 to 5 m bgl in 38.62% of wells, between 5 to 10 m bgl in 22.80% of wells, between 10 to 20 m bgl in 8.80% of wells and between 20-40 m bgl in 1.23% of wells and greater than 40 m water level observed in 0.14 % of the wells. (Fig 3.3 and 3.4).

Shallow water level of less than 2 m bgl in parts of South Eastern districts like Dindori, Mandla, Seoni, Chhindwara and Betul and also in Central districts like Damoh, Vidisha, Raisen and in isolated patches in Jhabua, Gwalior and Sagar etc. Water level of 2 to 5 m bgl is observed all over Madhya Pradesh and maximum wells are falling in this range. The water level between 2-5 mbgl is observed in Alirajpur, Khandwa, Umaria, Dindori, Khandwa, Rajgarh, Khargone, Betul, Shivpuri and Shajapur. 22% area of the State is covered by depth to water level of 5 to 10 m bgl is observed throughout the state with significant area in Sheopur, Datia, Shivpuri, Singrauli, Dhar, and Hosangabad. Water level of 10 to 20 m bgl is covered in 8.80% of the State area. Water levels in the range of 20 to 40 m covers 1% area of the State covering mainly in Northern Districts like Morena, Gwalior, Burhanpur, and Bhind. (Annexure-II).

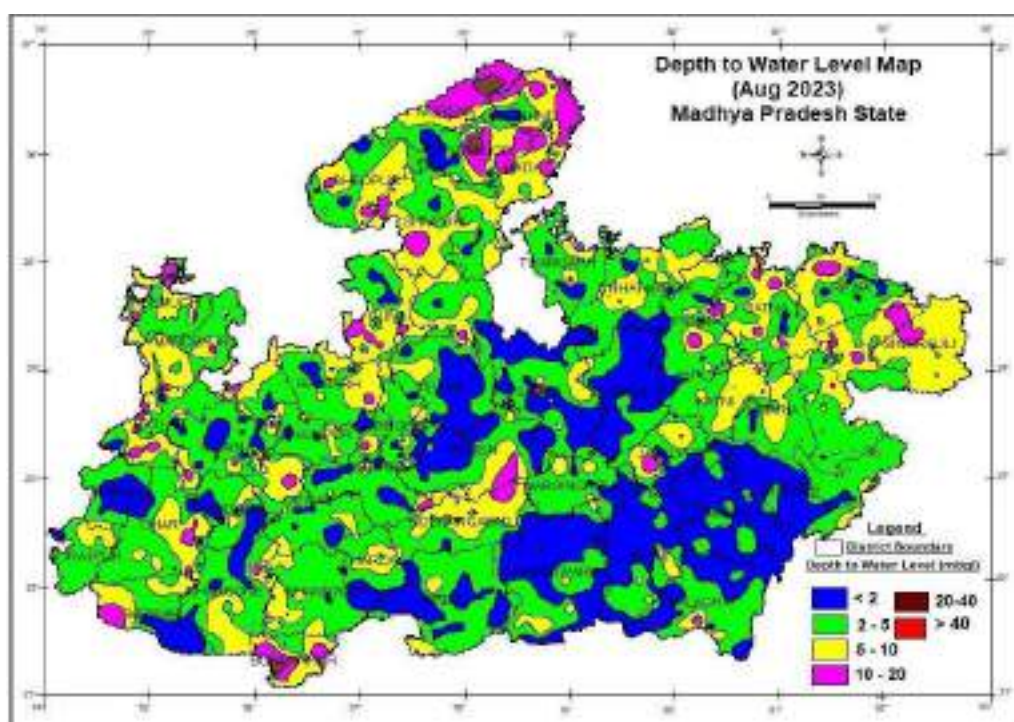

Fig: 3.3 Showing the Depth to Water Level Map (August 2023) of Madhya Pradesh

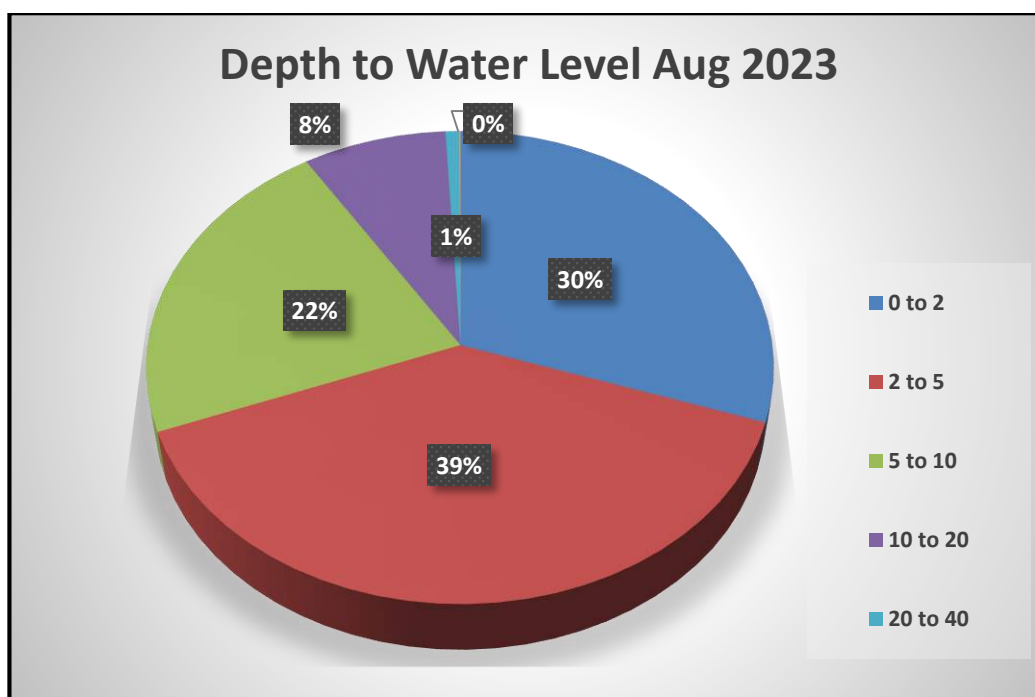

Fig: 3.4 Pie Chart showing Depth to Water Level Aug 2023

3.1.3 DEPTH TO WATER LEVEL NOVEMBER 2023

Analysis of depth to water level data of 1434 wells shows Depth to Water levels ranges from 0.1 m bgl to 45.27 m bgl in Madhya Pradesh state. (**Fig 3.3.**). During this year the state has received normal rainfall and many of the districts are rainfall deficit. Very shallow water levels up to 2 m bgl are seen in Sehore, Chhindwara, Mandla, Dindori, Damoh, and Vidisha and in pockets in many districts. About 11.63 % of monitoring wells recorded water level less than 2 m bgl category. About 44.45% of monitoring wells spreading all over Madhya Pradesh state has recorded a water level in the depth range of 2-5 m bgl. Depth to water levels ranging 5-10 m bgl is noticed prominently in all parts of the state and in pockets in many districts of the state. About 33.58% of wells fall in this category. Deeper ground water levels ranging 10-20 m bgl are seen in northern part and in isolated patches in Singrauli, Satna and Rewa districts and in patches in many districts of the state. About 9.40% of wells in the state fall in this category. Ground water levels of 20 m – 40 m are found in about 0.83% of the wells and are seen in Morena, Burhanpur, Gwalior and Sheopur Districts. The depth to water level map of November 2023 is shown in **Fig 3.3** for the state of Madhya Pradesh (**Fig 3.5**) (**Annexure-III**).

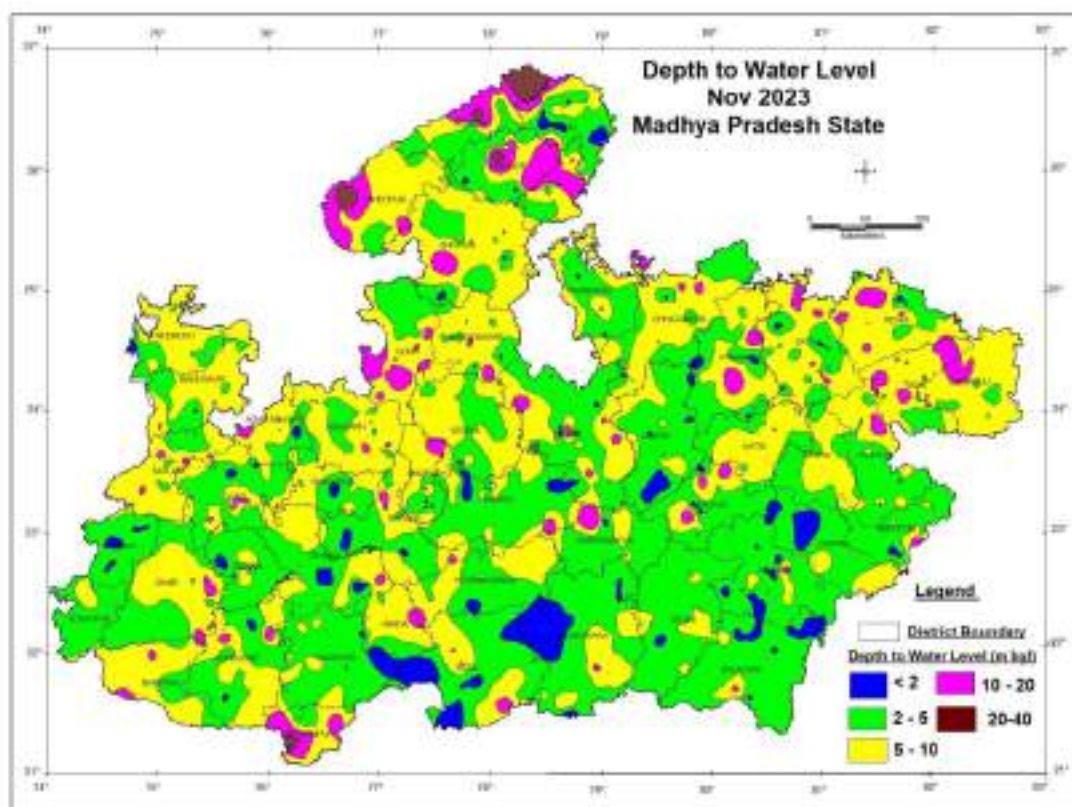

Fig: 3.5 Showing the Depth to Water Level Map (November 2023) of Madhya Pradesh

3.1.4 DEPTH TO WATER LEVEL JANUARY 2024

Analysis of depth to water level data of 1481 wells shows water levels vary between 0.13 m bgl (Damoh district) to 98.43 m bgl (Indore district). Water level of less than 2 m bgl is recorded in 7.29% of wells, between 2 to 5 m bgl in 34.5% of wells, between 5 to 10 m bgl in 43.34% of wells, between 10 to 20 m bgl in 13.32 % of wells, between 20-40 m bgl in 1.08% of wells and water level more than 40 mbgl is observed in 0.47% of wells (**Fig 3.6**).

Shallow water level of less than 2 m bgl as isolated patches in parts of Dindori, Chhindwara, Damoh, Balaghat, Mandla districts covering only an area of 7.46% of the State. Water level of 2 to 5 m bgl is observed in parts of Dindori, Balaghat, Chhindwara, Seoni, Chhatarpur, Panna, Damoh, Narsinghpur, Khandwa, Dewas, Khargone, Barwani, Alirajpur, Jhabua, Bhind districts covering an area of 35.29% of the State. 41.86% area of the state is covered by depth to water level of 5 to 10 m bgl is observed throughout the state with significant area in Sheopur, Shivpuri, Ashoknagar, Guna, Tikamgarh, Chhatarpur, Damoh, Sagar, Panna, Rewa, Satna, Shadol, Barwani, Khargone, Khandwa, Betul, Sidhi, Singrauli districts. Water level of 10 to 20 m bgl is covered in 13.32% of the State area. Water levels of 20 to 40 m bgl cover 1.56% area of the State covering mainly Shajapur, Dewas, Dhar, Burhanpur, Gwalior, Morena, Bhind, Datia districts. Water levels greater than 40 m bgl cover 0.51% of the state and is mainly covering Shajapur district (**Annexure-IV**).

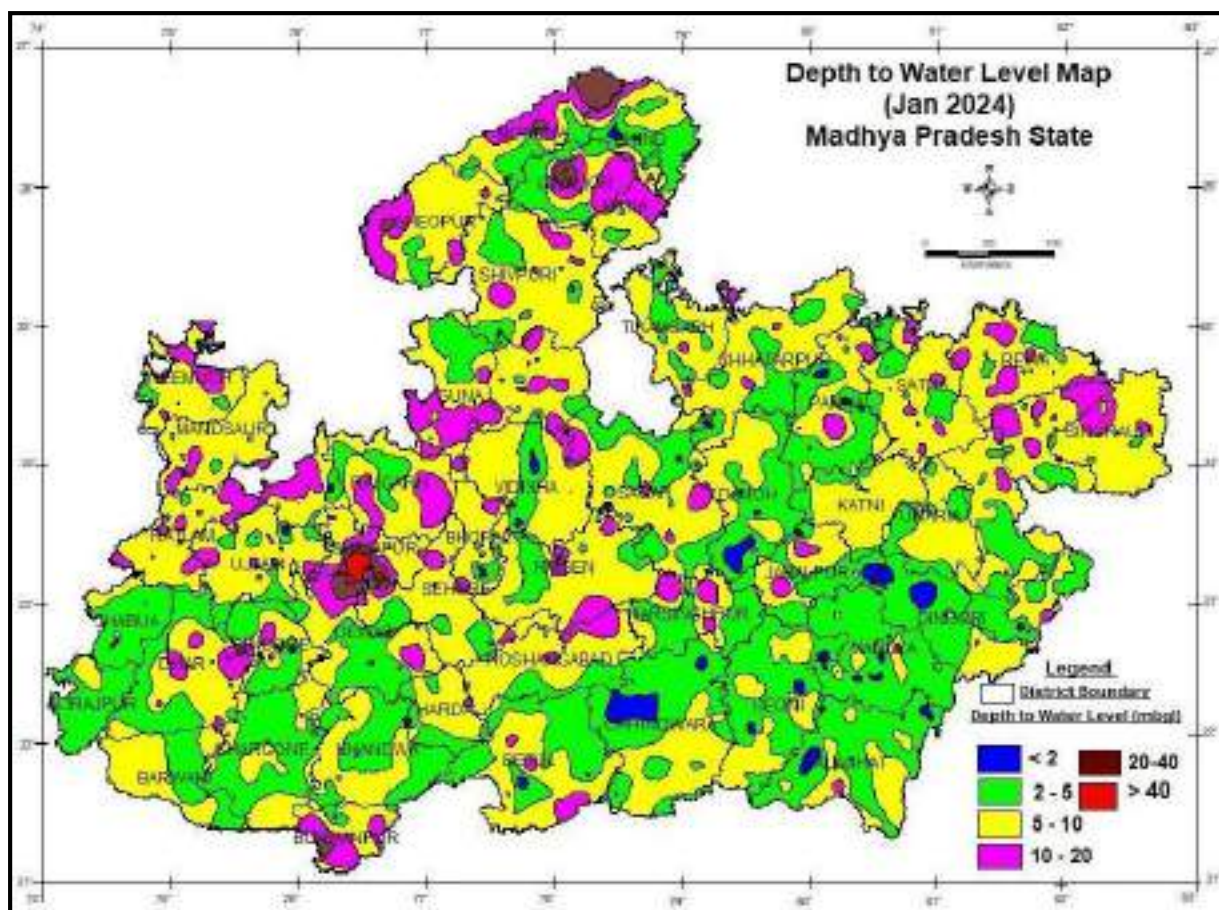

Fig:-3.6- Showing the Depth to Water Level Map (January-2024) of Madhya Pradesh

3.2 WATER LEVEL FLUCTUATIONS

Water level fluctuations were analysed and maps were prepared after every water level measurement comparing the current water levels with that of the same season of the previous year, preceding season, pre-monsoon season and the decadal seasonal mean. These fluctuations were carefully examined to decipher the ground water situation with respect to time.

3.2.1 WATER LEVEL FLUCTUATION MAY 2022 TO MAY 2023

The ground water levels of monitoring wells during May 2022 were compared with those of May 2023 (**Fig-3.7 and 3.8**) to decipher the changes that took place in the groundwater regime. In Madhya Pradesh State, out of 1032 well, 597 are showing rise in water level and 435 are showing declining water level. Water level rise of less than 2 m is recorded in 67.5% wells, 2 to 4 m in 17.4% wells and more than 4 m in 15.1% of the wells. Water level rise of less than 2 m is seen in Seopur, Morena, Bhind, Gwalior, Dhar, Jhabua, Barwani, Panna, Satna, Balaghat, Chhindwara, Tikamgarh, Betul districts. Water level rise of 2 to 4 m is observed mainly in districts such as Sheopur, Morena, Tikamgarh, Satna, Ujjain, Jhabua, Khargone, Khandwa, Burhanpur, Chhindwara, Panna, and Balaghat. Rise of more than 4 m is significantly observed in Sheopur, Bhind, Morena, Gwalior, Jhabua, Chhindwara, Khandwa districts.

Total of 435 wells that have observed fall in water levels. 70.1% have recorded less than 2 m bgl and 18.16% in the range of 2 to 4 m and remaining 11.72% wells observed water level fall of more than 4 m. Fall of less than 2 m is mainly observed in parts of Singrauli, Rewa, Balaghat, Shadol, Seoni, Mandla, Jabalpur, Panna, Satna, Chhatarpur, Tikamgarh, Damoh, Narsinghpur, Chhindwara, Betul, Hoshangabad, Khargone, Barwani, Jhabua, Dhar, Ujjain, Neemuch, Mandsaur, Guna, Ashoknagar, Shivpuri, Sheopur, Gwalior, Bhind districts. Fall of 2 to 4 m is observed mainly in Rewa, Sidhi, Sagar, Seoni, Chhindwara, Betul, Khandwa, Dewas, Dhar, Shivpuri, Guna, Vidisha regions. Fall of beyond 4 m is observed as as isolated patches in Rewa, Umaria, Betul, Narmadapuram, Barwani, Shivpuri, Bhind, Morena, Neemuch, Mandsaur districts. (Annexure-V).

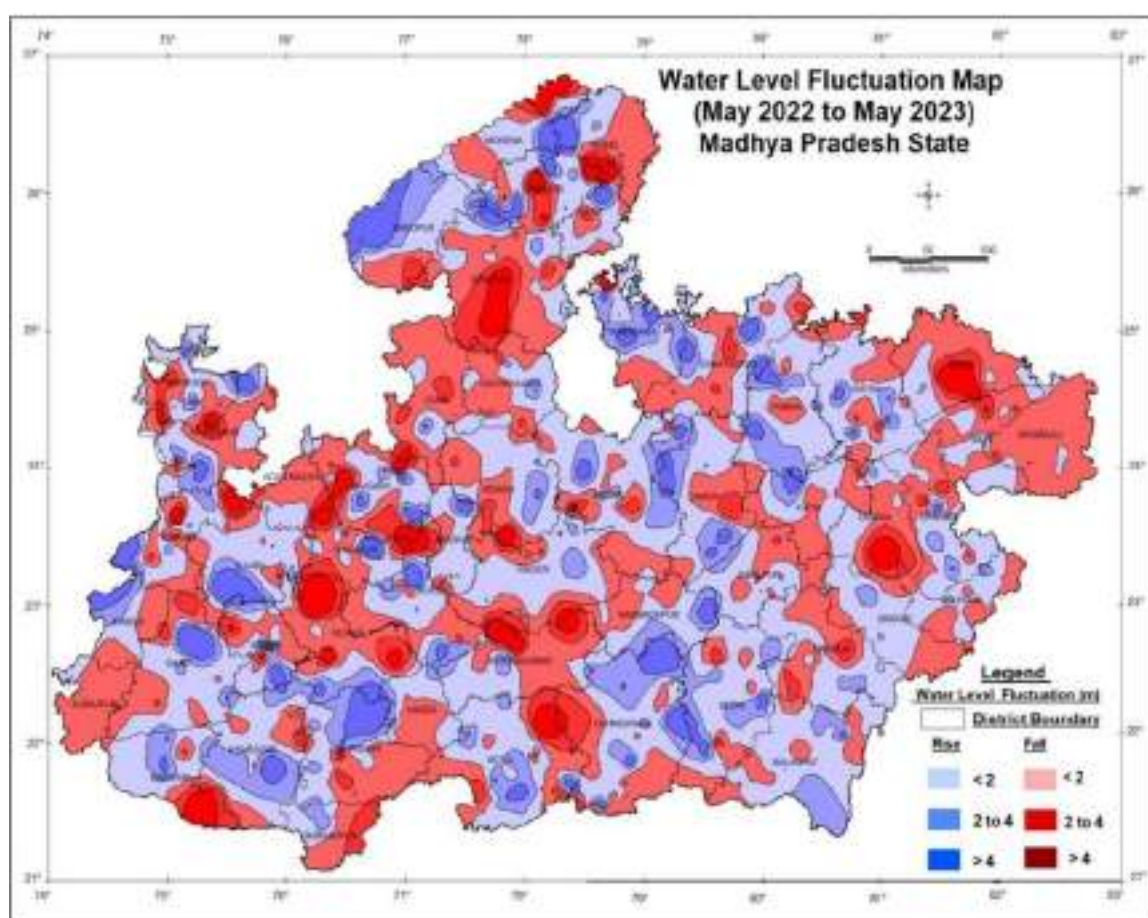

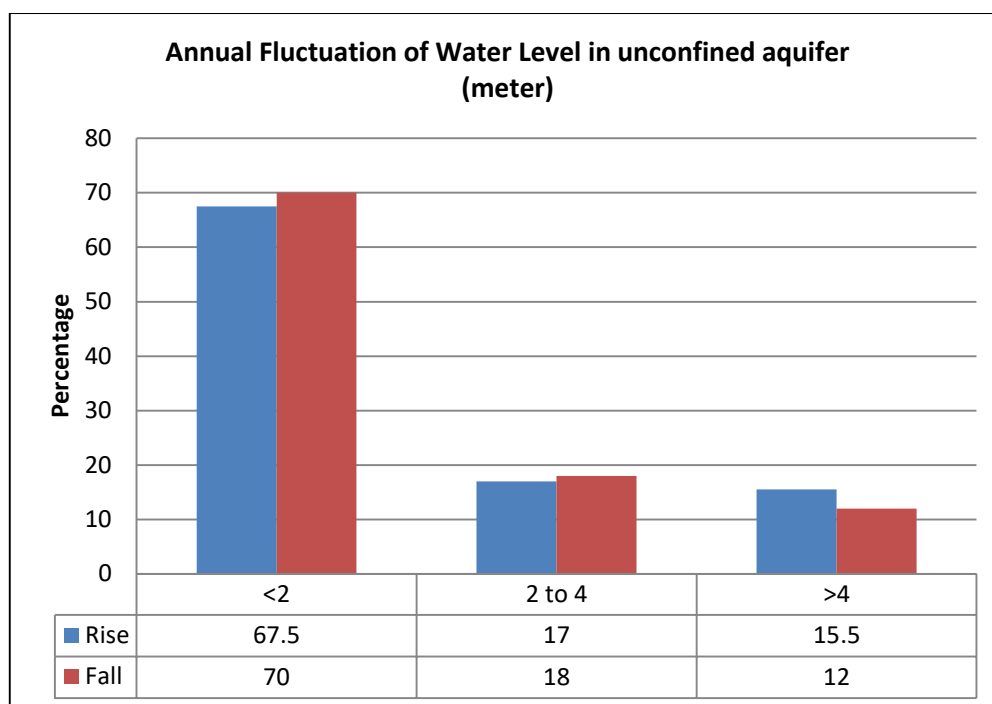

Fig: 3.7 Annual Water Level Fluctuation (May 2022 to May 2023)

**Fig: 3.8 Percentage of wells showing rise and fall in WL in unconfined aquifer
(May 2022 to May 2023)**

3.2.2 WATER LEVEL FLUCTUATION AUGUST 2022 TO AUGUST 2023

The ground water levels of monitoring wells during August 2023 were compared with those of August 2022 (**Fig-3.9 and 3.10**) to decipher the changes that took place in the ground water regime. About 29.42% of wells show rise and 69.81 % decline in water levels. The decline in water level can be due to decline in rainfall in 2023 as compared to 2022 in Madhya Pradesh State.

343 wells showing rise in water level. Water level rise of less than 2 m is recorded in 2.40% wells, 2 to 4 m in 7.12% wells and more than 4 m in 27.62% of the wells. Water level rise of less than 2 m is recorded mainly in parts of Northern and Western districts like Morena, Bhind, Datia, Gwalior, Barwani, Dhar, Alirajpur, Khargone, Jabalpur, Dindori, Jhabua, Chhindwara, and Indore. Water level rise of 2 to 4 m is observed mainly in districts such as Morena, Bhind, Gwalior, Jabalpur, Dhar, Barwani, Betul and Damoh. Rise of more than 4 m is significantly observed in 27.62% of well found all over MP mainly in Gwalior, Morena, Narsingpur and Ujjain.

The 814 wells experiencing a decline in water levels, 47.86% showed decline of less than 2 meters, 12.35% exhibited declines ranging from 2 to 4 meters, and the remaining 9.61% recorded Water Level decline of more than 4 meters in water levels. Fall of less than 2 m is

observed all over Madhya Pradesh with significant zones in Chhatarpur, Sigraili, Umari, Betul, Balaghat, Mandla, Raisen, Sheopur, Harda, Dewas, Ujjain, Rajgarh and Dindori etc. Fall of 2 to 4 m is observed mainly in Sheopur, Shivpuri, Rajgarh, Neemuch, Mandsaur, Satna, Singrauli, Raisen, Hosangabad, Burhanpur, Rajgarh, Vidisha, Ujjain, Neemuch, Mandsaur, Guna and Satna district. Fall of beyond 4 m is observed as isolated patches in Shivpuri, Satna, Sheopur, Rajgarh, Mandsaur, Hosangabad and Burhanpur (**Annexure-VI**).

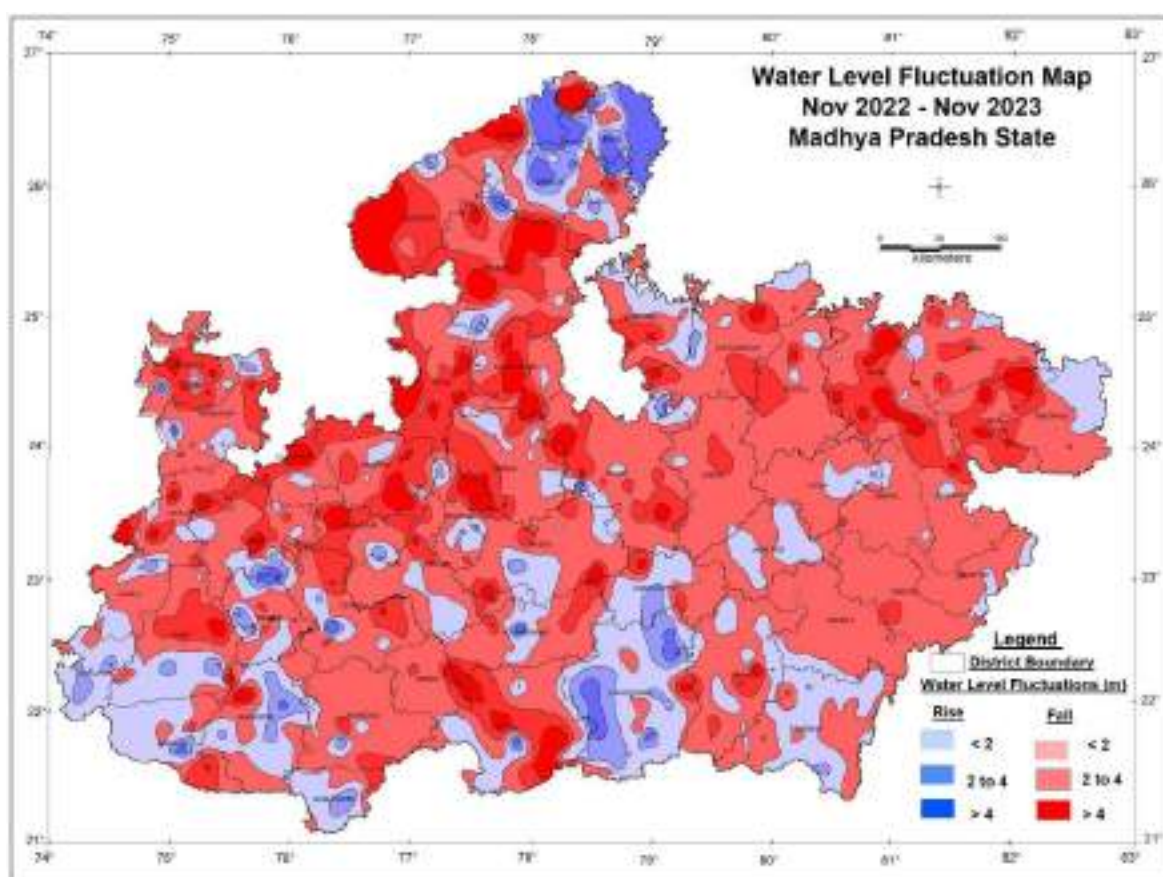

Fig: 3.11 Annual Water Level Fluctuation (November 2022 to November 2023)

3.2.4 WATER LEVEL FLUCTUATION JANUARY 2023 TO JANUARY 2024

The water level fluctuation map for the period January 2024 with reference to January 2023 is presented in (**Fig-3.12**) for the Madhya Pradesh State. Out of 1049 wells, 50.21% wells show rise in water level and 47.65% of the well show decline in Water level. Water level rise of less than 2 m is recorded in 33.75% wells, 2 to 4 m in 9.41% wells and more than 4 m in 7.05% of the wells. Water level rise of less than 2 m is seen in Singrauli, Rewa, Umari, Katni, Jabalpur, Dindori, Narsinghpur, Hoshangabad, Betul, Harda, Khandwa, Burhanpur, Khargone, Barwani, Dhar, Alirajpur, Jhabua, Ratlam, Neemuch, Mandsaur, Vidisha districts. Water level rise of 2 to 4 m is observed mainly in districts such as Shivpuri, Alirajpur,

Barwani, Khargone, Jabalpur, Chhindwara, Betul. Rise of more than 4 m is significantly observed in Bhind, Morena, Gwalior, Jabalpur, Chhindwara, Indore, Bhopal districts. 512 wells that have observed fall in water levels, 35.44% have recorded less than 2 m bgl and 7.15% in the range of 2 to 4 m and remaining 5.06% wells observed water level fall of more than 4 m. Fall of less than 2 m is mainly observed in parts of Singrauli, Satna, Rewa, Dindori, Anuppur, Balaghat, Panna, Damoh, Chhatarpur, Sheopur, Shivpuri, Gwalior, Ashoknagar, Guna, Shajapur, Raisen, Hoshangabad, Betul districts. Fall of 2 to 4 m is observed mainly in Rewa, Sidhi, Sheopur, Shivpuri, Datia, Rajgarh, Guna district. Fall of beyond 4 m is observed as isolated patches in Rewa, Sheopur, Shivpuri, Morena, Bhind, Guna, Neemuch, Dhar districts (**Annexure-VIII**).

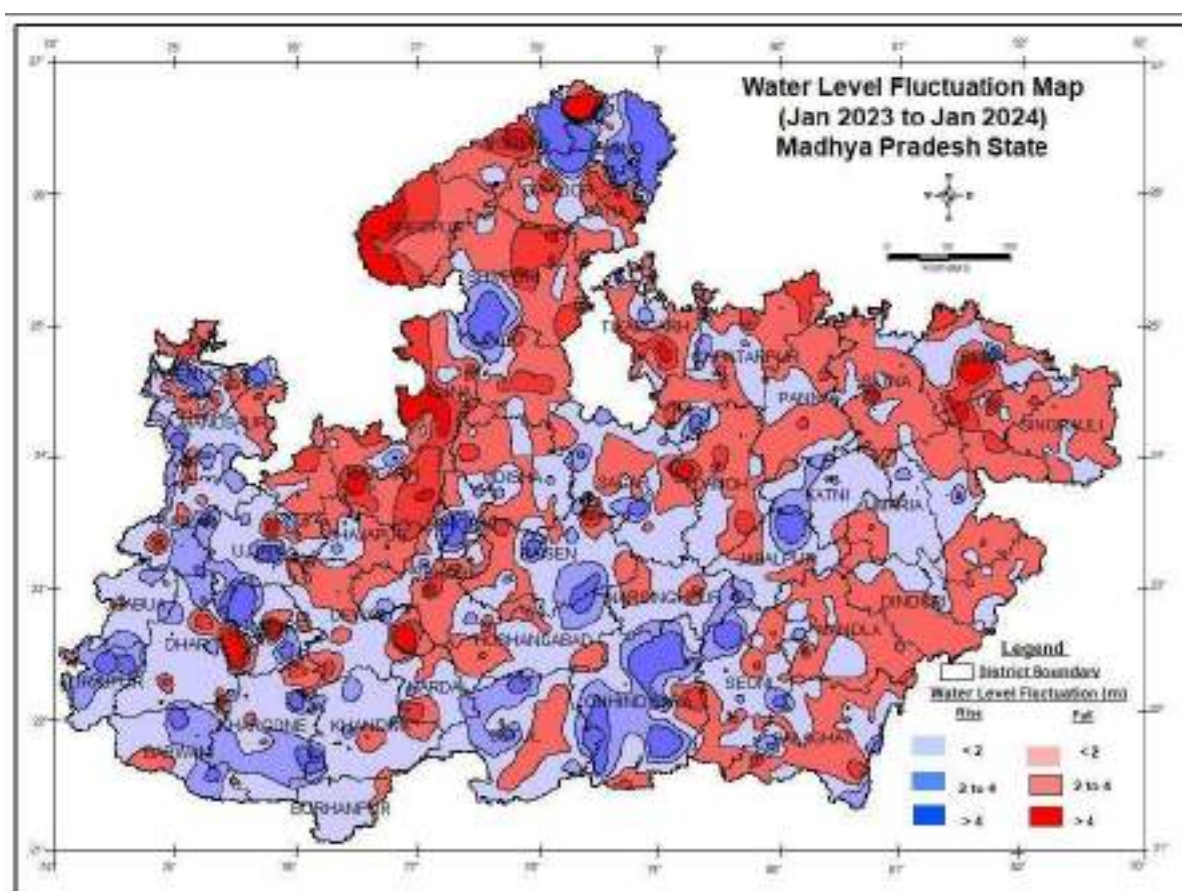

Fig: 3.12 Annual Water Level Fluctuation (January 2023 to January 2024)

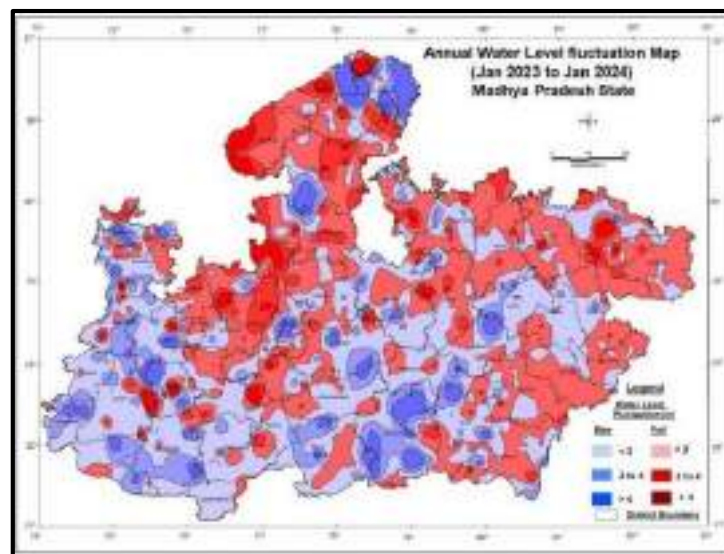

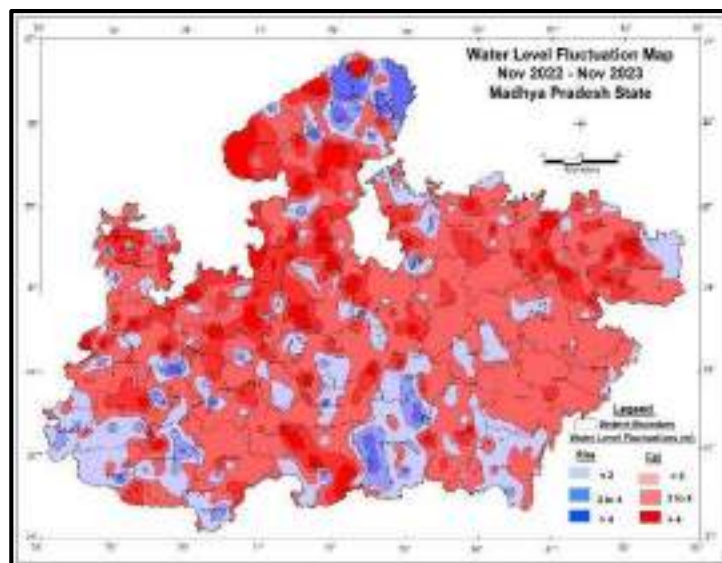

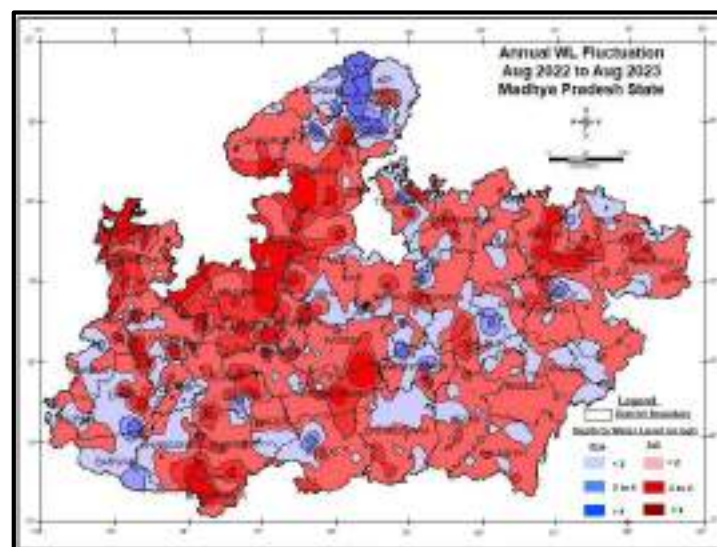

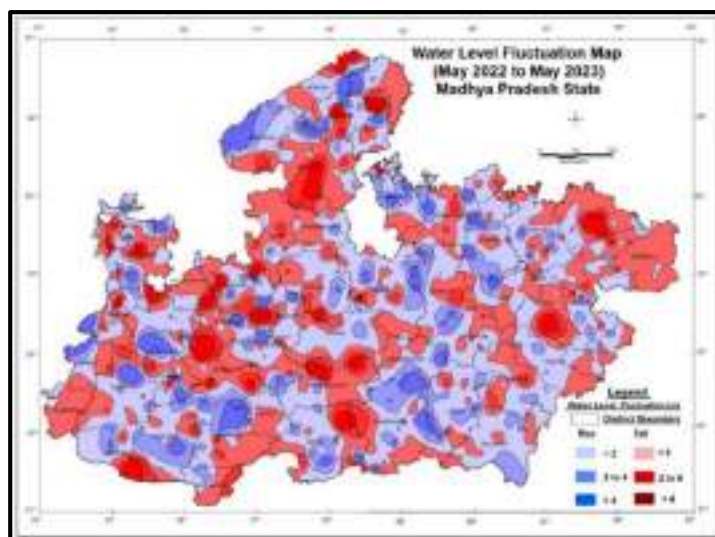

Fig: 3.13 Annual Water Level Fluctuation at a Glance

3.3 SEASONAL WATER LEVEL FLUCTUATIONS

3.3.1 WATER LEVEL FLUCTUATION MAY 2023 TO AUGUST 2023

Water levels have shown a general rise in 93.52% of the wells. Out of 1115 wells, water level rise of less than 2 m is recorded in 21.37% wells, 2 to 4 m in 31.80% wells and more than 4 m in 40.35% of the wells. Water level rise of less than 2 m is seen in Panna, Shivpuri, Singrauli, Anuppur, Ashoknagar, Balaghat, Betul, Bhopal, Bhind, Chattarpur, Damoh, Datia, Gwalior, Hosangabad, Jabalpur, Khandwa, and Khargone districts. Water level rise of 2 to 4 m is observed mainly in districts such as Agar Malwa, Anuppur, Alirajpur, Ashoknagar, Betul, Bhind, Dindori, Gwalior, Raisen and Shahdol. Rise of more than 4 m is significantly observed in Alirajpur, Betul, Chattarpur, Chhindwara, Dewas, Indore, Mandsaur, Narsinghpur, Ratlam, Sagar districts **Fig- 3.14 and 3.15.**

The 70 wells experiencing a decline in water levels, 3.66% showed decreases of less than 2 meters, 0.90% exhibited declines ranging from 2 to 4 meters, and the remaining 1.13% recorded fall exceeding 4 meters in water levels. Fall of less than 2 m is mainly observed in parts of Rewa, Seoni, Tikamgarh, Sehore, Singrauli and Morena districts. Fall of 2 to 4 m is observed mainly in Barwani, Mandsaur, Neemuch, Rajgarh, Sidhi and Ujjain Districts. Water level fall of more than 4 m is observed in Ashoknagar, Mandsaur, Neemuch, districts **(Annexure-IX).**

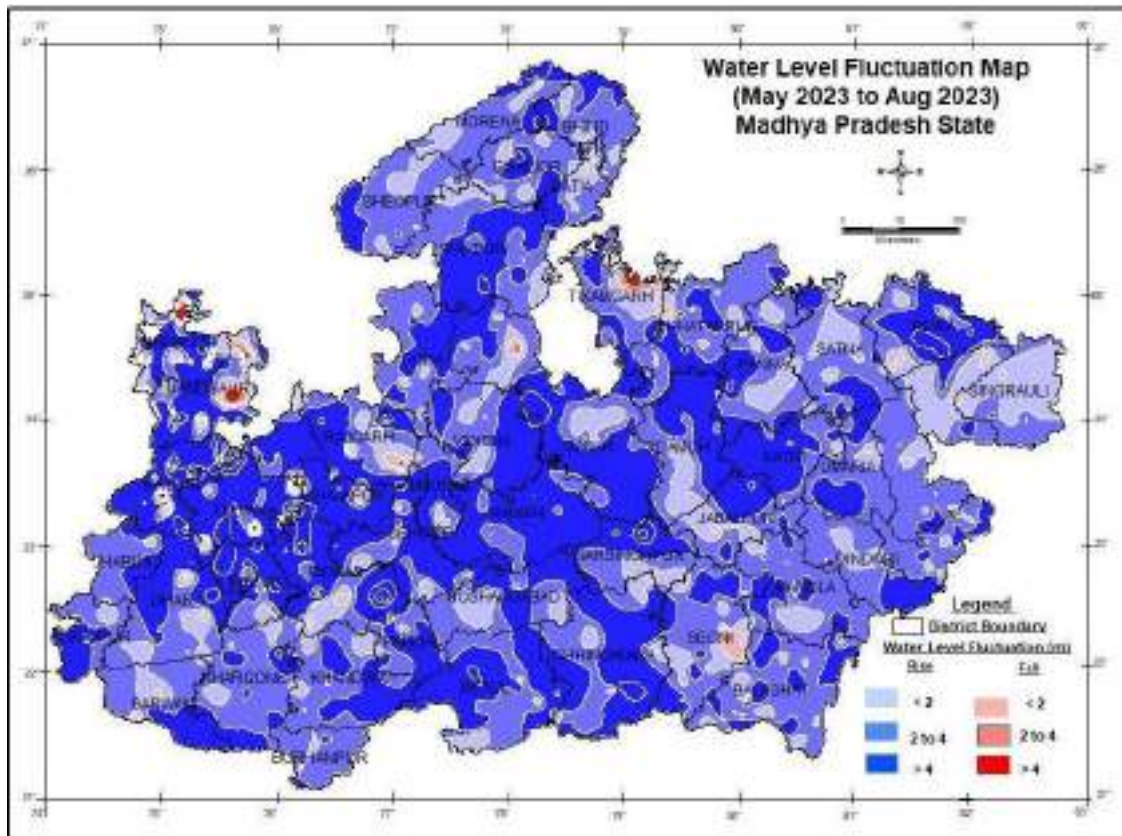

Fig: 3.14 Seasonal Water Level Fluctuation from May 2022 to August 2023

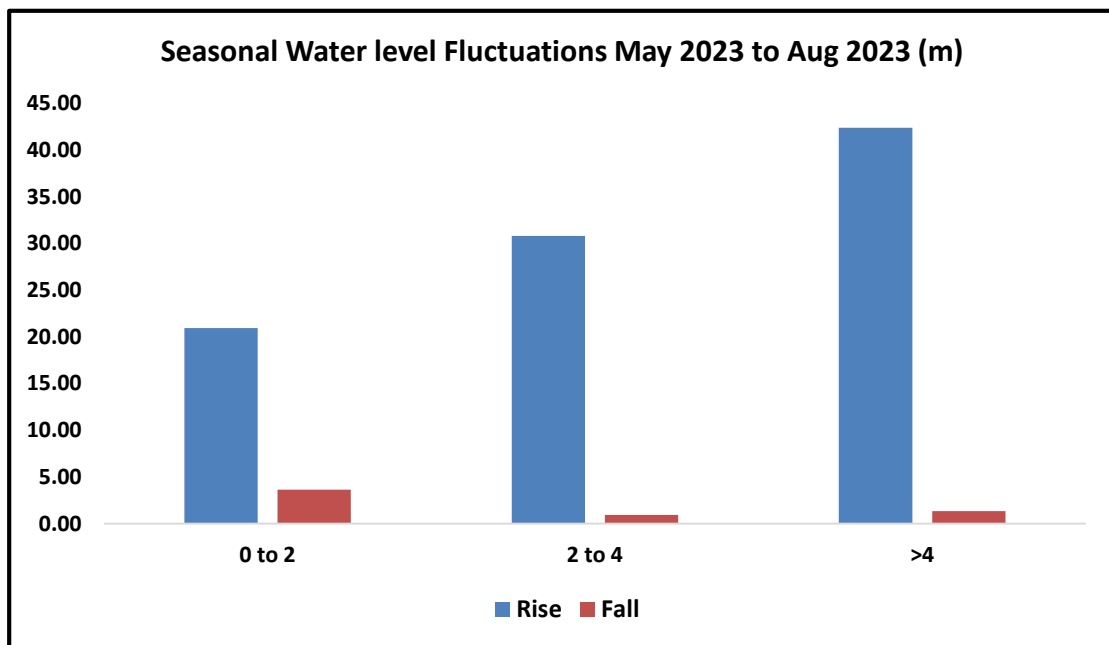

Fig: 3.15: Percentage of wells showing rise and fall in WL in unconfined aquifer (May 2023 to Aug 2023)

3.3.2 WATER LEVEL FLUCTUATION MAY 2023 TO NOVEMBER 2023

Water levels have shown a general rise in 88.63 % of the wells. Such a rise is a normal phenomenon in the hydrological cycle since the monsoon rainfall forms the sole source of natural recharge to ground water regime in the state. Rise in the order of 0 to 2 m is seen in 34.39% of wells in northern and south western part of state. About 32.41 % of the wells have shown a rise of 2-4 m and are seen in almost eastern part of the district and in some part of northern and south western part of district. Significant rise of > 4 m is found in 33.2% of wells in entire parts of the state mainly in the Bhind, Indore, Shajapur, Dewas, Katni, Raisen, Hosangabad and Chhindwara and in some part of north eastern part of district. About 11.37 % of the wells in Madhya Pradesh shows the decline in water level in the state amongst the well showing Water Level decline, about 65.89 % of wells show a marginal decline in water level upto 2 m, 20.16% wells more than 2 m and significant decline of > 4 m shows in 13.95% of wells. The decline in water level is seen in northern part of state. The seasonal Water Level Fluctuation May 2023 to November 2023 is shown in the **Fig-3.16 and 3.17 (Annexure-X)**.

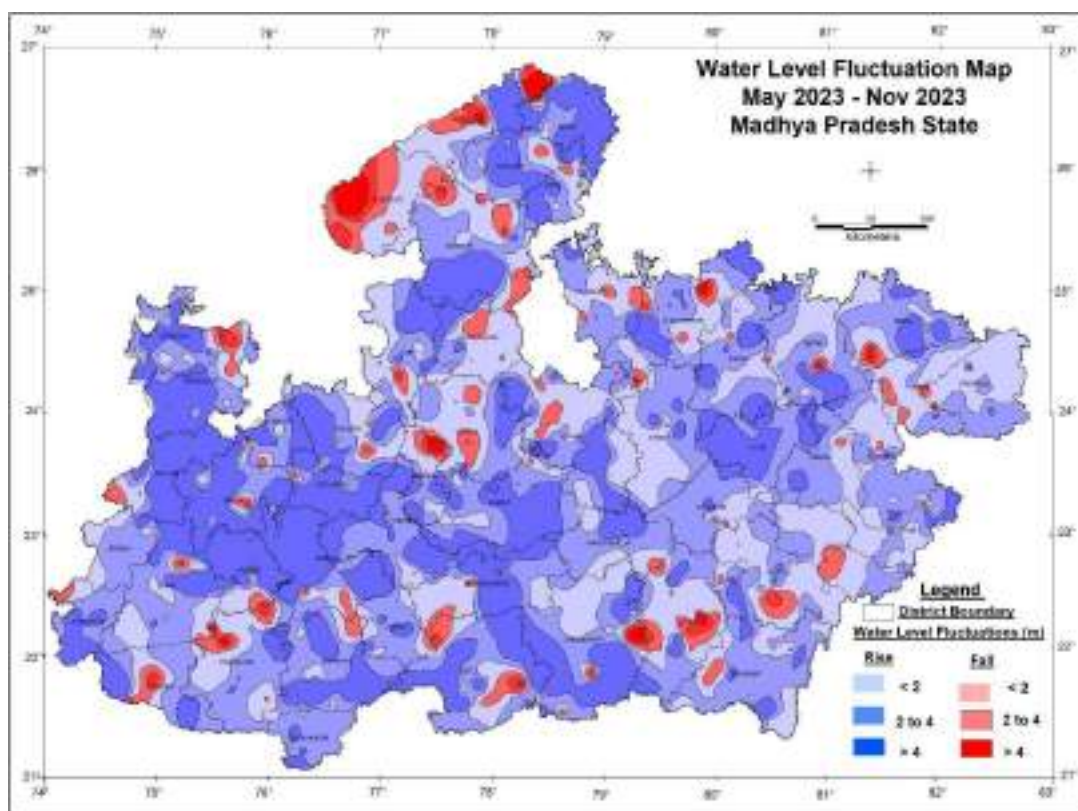

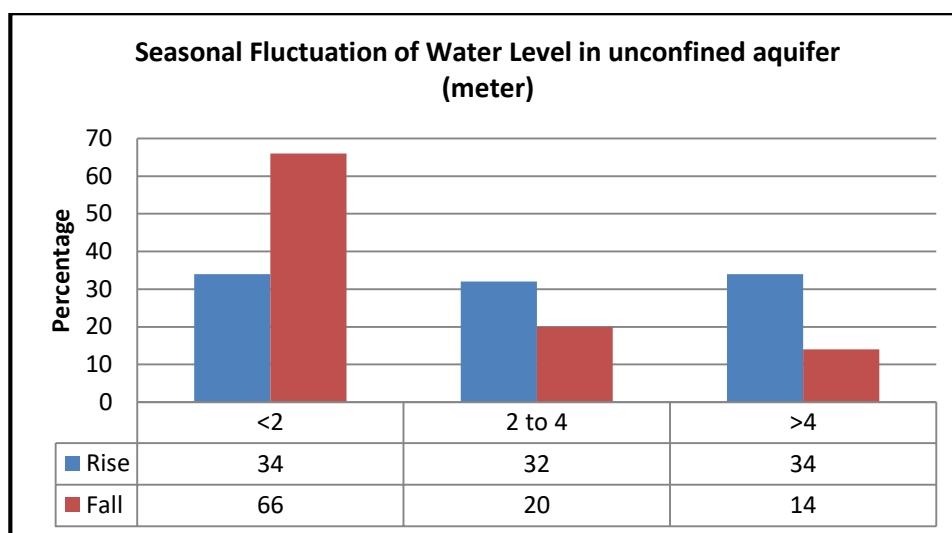

Fig: 3.16 Seasonal Water Level Fluctuation from May 2023 to November 2023

**Fig: 3.17 Percentage of wells showing rise and fall in water level in unconfined
Aquifer (May 2023 to November 2023)**

3.3.3 WATER LEVEL FLUCTUATION MAY 2023 TO JAN 2024

The water level fluctuation map for the period May 2023 to January 2024 is presented in **Fig 3.18** for the Madhya Pradesh State.

Water levels have shown a general rise in 82.55 % of the wells. Such a rise is a normal phenomenon in the hydrological cycle since the monsoon rainfall and post monsoon rainfall in some parts of the State forms the sole source of natural recharge to ground water regime in the state. Rise in the order of 0 to 2 m is seen in 49.02% of wells and are seen in most of the district of the state. About 28.21% of the wells have shown a rise of 2-4 m and seen in west and North West part of the state and in many districts in patches. Significant rise of >4 m is found in 22.77% of wells, in Bhind, Katni, Dewas, Ujjain, Shivpuri, Ratlam, Chhindwara, Indore and in patches in many districts of the state.

About 71.13% of the wells in Madhya Pradesh state show a marginal decline in water level up to 2 m and 18.04% wells between 2-4 m in Northern regions and in districts like Singrauli, Sheopur, Betul, Balghat, Damoh, Guna, Seoni etc. The decline in water level of more than 2 m (10.82%) is mainly observed in Chhindwara, Sheopur, Neemuch, Barwani, Damoh, Morena, Betul and Balaghhat and in part of many district of the state. Decline in water level is well correlated with the less rainfall during pre and post monsoon season. (**Annexure-XI**).

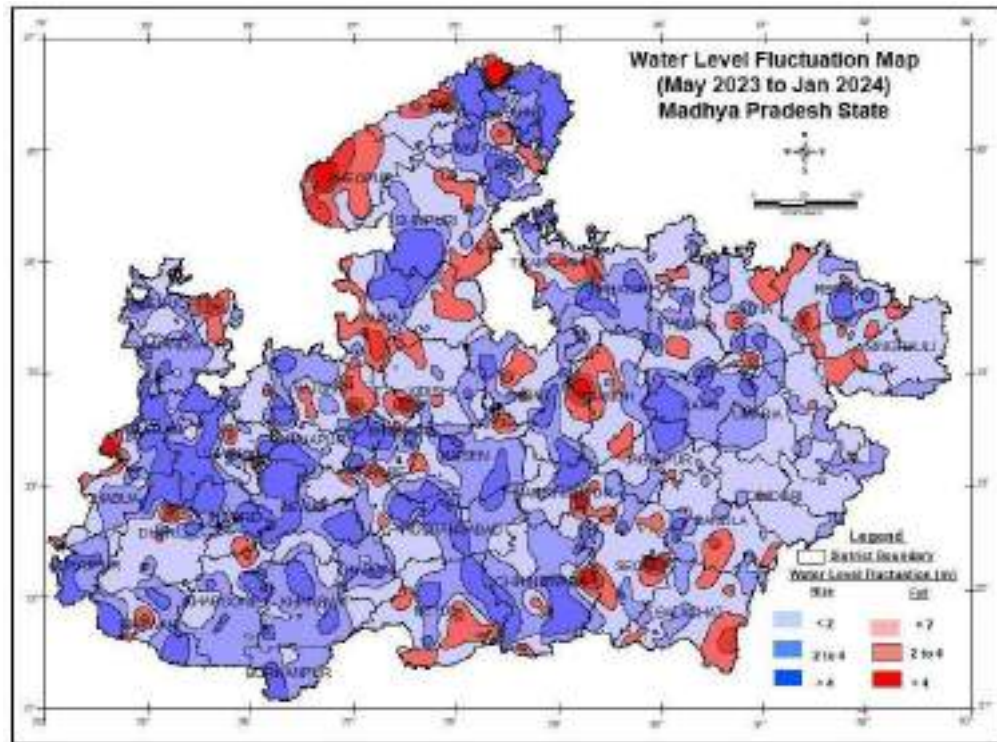

Fig: 3.18 Seasonal Water Level Fluctuation from May 2023 to Jan 2024

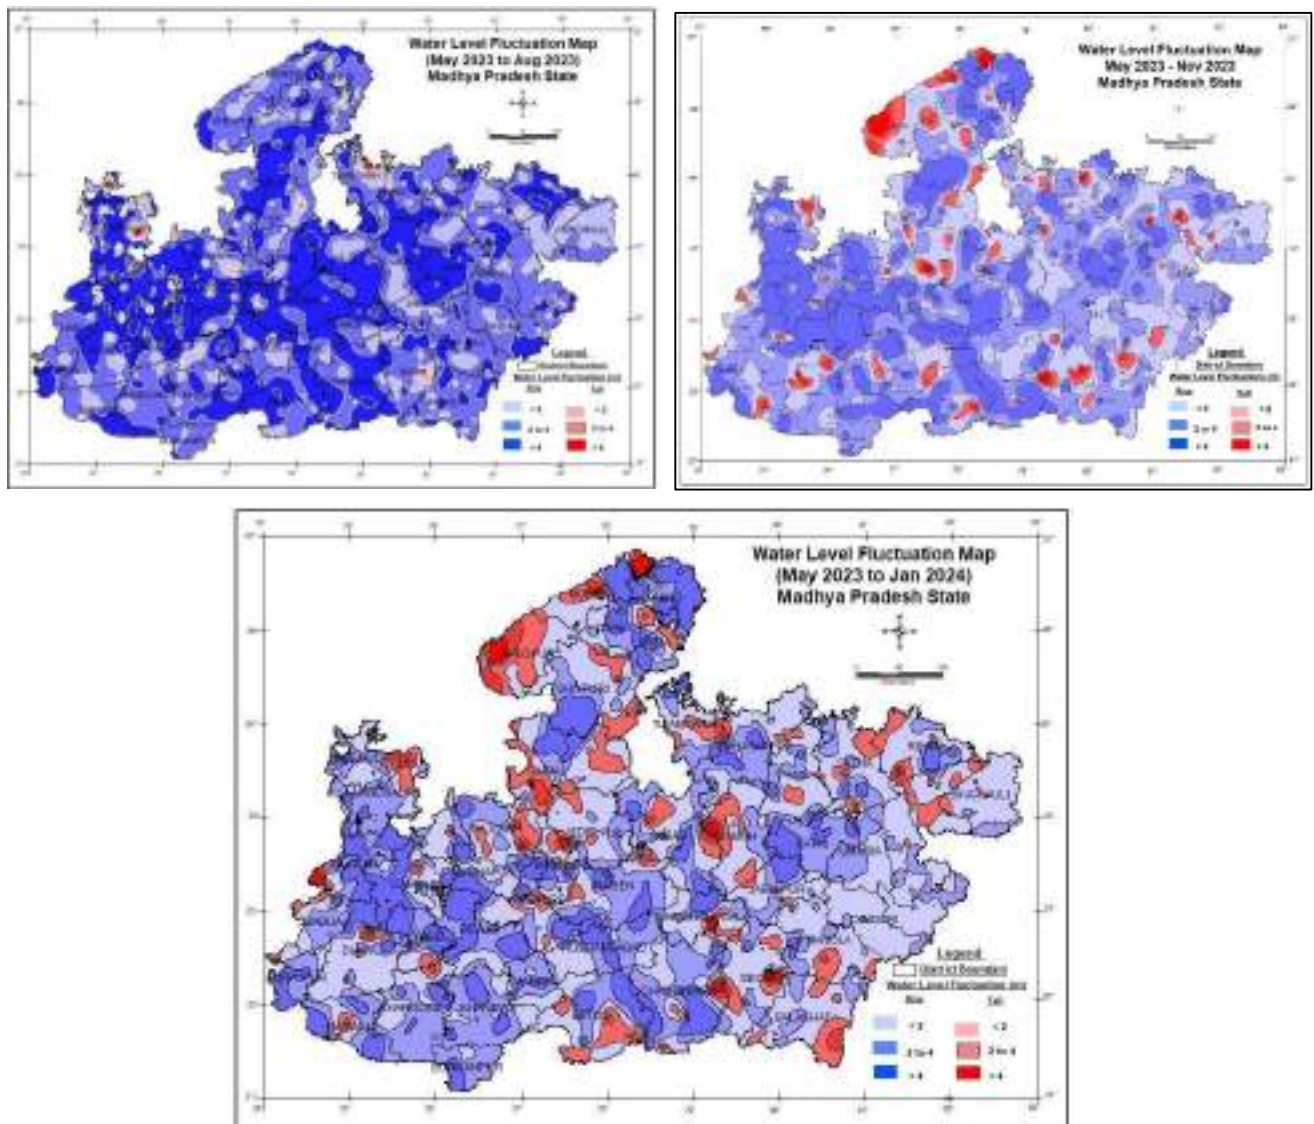

Fig: 3.19 Seasonal Water Level Fluctuation at a Glance

3.4 DECADAL WATER LEVEL FLUCTUATIONS

Depth to ground water level of a particular monitoring season is compared with its 10 years of mean data, i.e., decadal mean of water levels, to get an idea about the water level conditions of that particular season with respect to the decadal mean. Such a comparison helps in the assessment of drought situations or otherwise of the abundance of ground water resources in a particular monitoring season. Decadal water level fluctuations at a glance are shown in Figure 3.27. The district wise decadal water level fluctuation and frequency distribution of wells in different ranges is given in **Annexures (XII to XV)**.

3.4.1 WATER LEVEL FLUCTUATIONS DECADAL MEAN (MAY 2013-2022) TO MAY 2023

The groundwater levels of May 2023 were compared with the 10 years May (2013-2022) average groundwater levels to decipher the long-term changes in the Ground water regime. It is observed that 63.75% of the wells show rise and about 36.25% of wells show decline in water levels in the state. 744 wells have register rise in water level. The water level rise of less than 2 m is recorded in 66.80% wells, 2 to 4 m in 19.9% wells and more than 4 m in 13.3% of the wells. Water level rise of 2 to 4 m is observed mainly in Sheopur, Vidisha, Barwani, Seoni, Khandwa District and rise of more than 4 m is significantly observed in Sheopur, Bhind, Tikamgarh, Neemuch, Mandsaur, Khandwa, Betul.

The 394 wells have registered fall in water level. 69% have recorded fall of less than 2 m while 19.5% in the range of 2 to 4 m and remaining 11.42% wells registered water level fall of more than 4 m. Fall of less than 2 m is observed mainly in parts of Singrauli, Raisen, Narmadapuram, Chhindwara, Burhanpur, Khargone, Alirajpur, Katni, Shivpuri, Khandwa district. Fall of 2 to 4 m, recorded in Shivpuri, Rewa, Umaria, Barwani, Morena, Khandwa districts. Fall beyond 4 m is recorded mainly in Shivpuri, Morena, Rewa, Umaria, Narmadapuram, Khargone districts (**Fig 3.20 and 3.21**) (**Annexures XVI**).

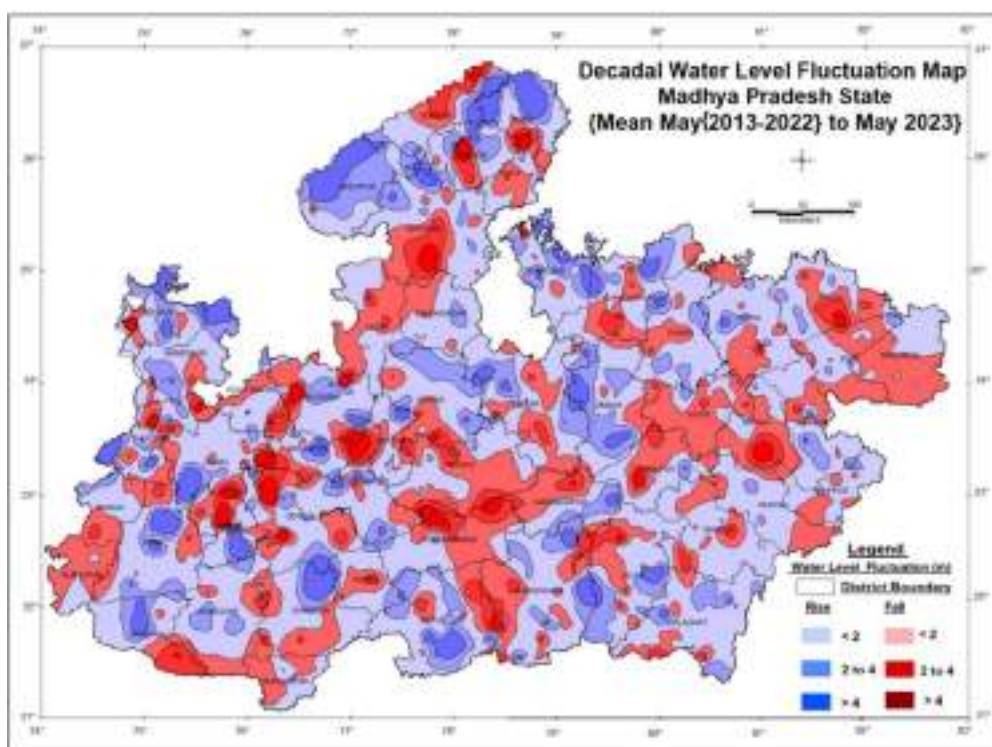

Fig: 3.20 Water Level Fluctuation Decadal Mean (May 2013-May 2022) to May 2023

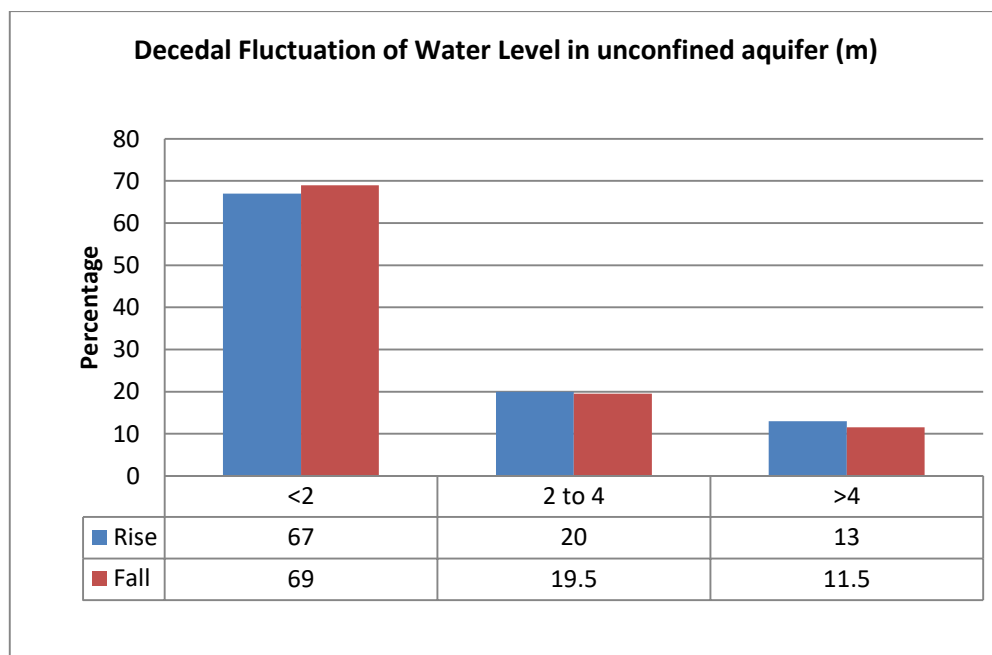

Fig: 3.21 Percentage of wells showing rise and fall in WL in unconfined Aquifer (Decadal Mean May (2013-2022) to May 2023)

3.4.2 WATER LEVEL FLUCTUATION DECADAL MEAN (AUGUST 2013-2022) TO AUGUST 2023

583 wells have experienced a rise in water level, water level rise of less than 2 m is recorded in 77.36% wells, 2 to 4 m in 15.61% wells and more than 4 m in 7.03% of the wells. Water level rise of less than 2 m is seen in all the districts, significantly in Damoh, Chhindwara, Balghat, Katni, Barwani, Alirajpur, Vidisha, Betul and Rewa District. Water level rise of 2 to 4 m is observed mainly Bhind, Gwalior, Narsinghpur, and Chhindwara district and rise of more than 4 m is significantly observed in Bhind, Chattarpur, Chhindwara, Narsinghpur and Ratlam. The 631 wells that have experienced fall in water level, 69.41% have recorded fall of less than 2 m while 16.96% in the range of 2 to 4 m and remaining 13.63% wells experienced a water level fall of more than 4 m. Fall of less than 2 m is observed in all districts mainly in parts of Singrauli, Sheopur, Shivpuri, Hosangabad, Khandwa, Harda, Burhanpur, Satna, Chhatarpur and Sheoput District. Fall of 2 to 4 m, recorded in Shivpuri, Rajgarh, Burhanpur, Neemuch and Mandsaur districts. Fall beyond 4 m is recorded mainly in Agar Malwa, Guna, Gwalior, Mandsaur, Neemuch, Singrauli, Tikamgarh, Rajgarh, Ratlam, Rewa, Satna, Sehore, Sidhi and Ujjain District and are showing water level decline (Fig 3.22 and 3.23). (Annexure-XVII).

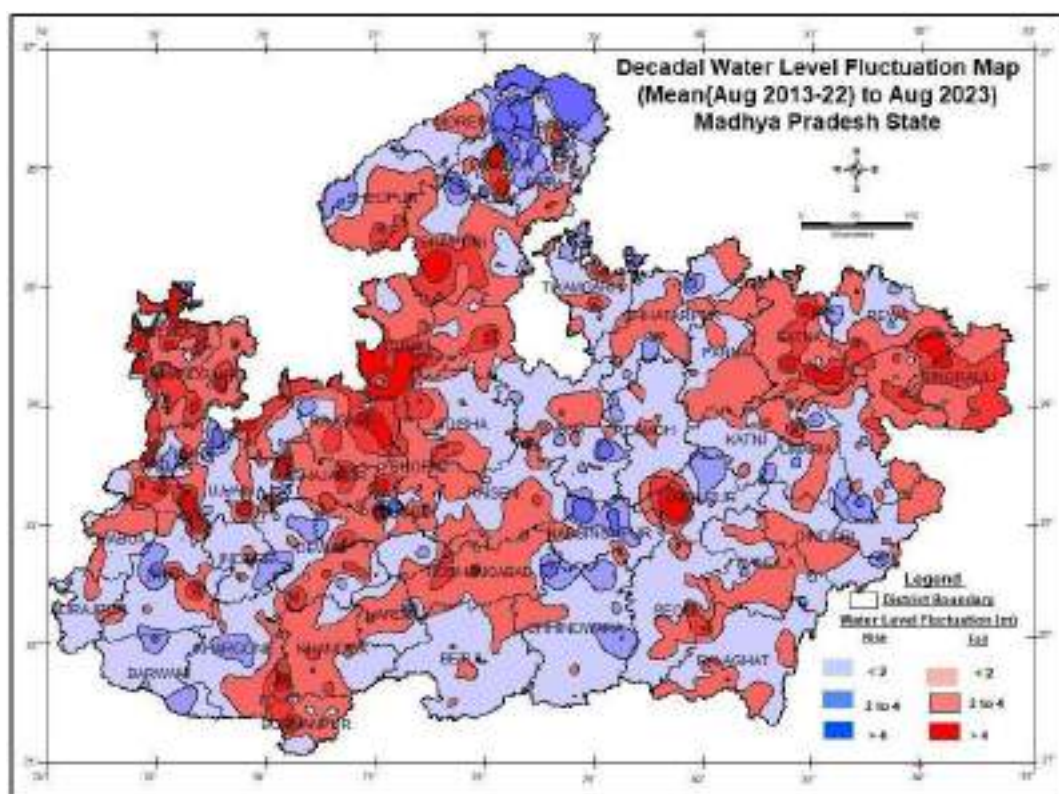

Fig: 3.22 Water Level Fluctuation Decadal Mean (Aug 2013-Aug 2022) to Aug 2023

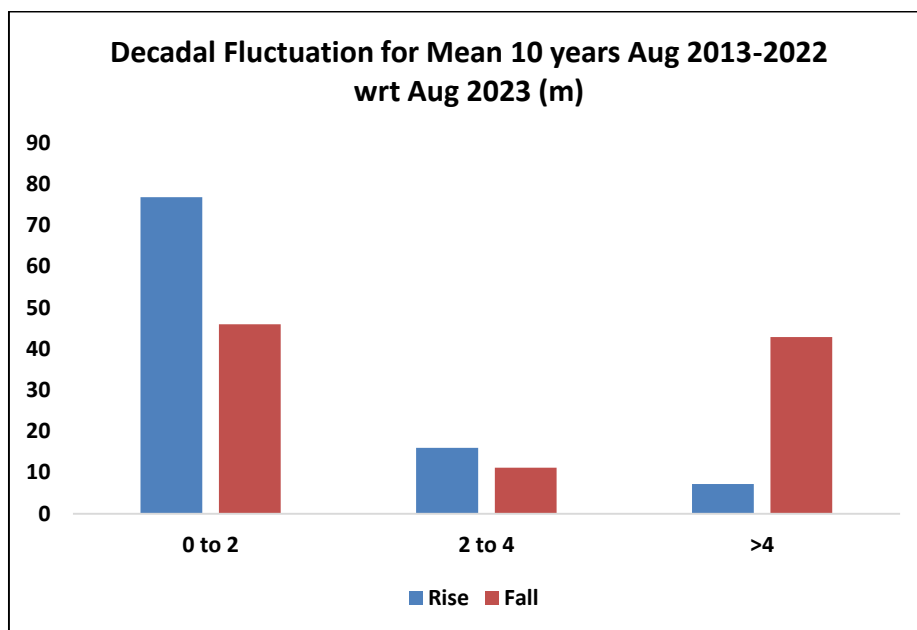

Fig: 3.23 Percentage of wells showing rise and fall in WL in unconfined Aquifer (Decadal Mean Aug (2013-2022) to Aug 2023)

3.4.3 WATER LEVEL FLUCTUATION MEAN (NOVEMBER 2013-2022) TO NOVEMBER 2023

The water level fluctuation map for the period November 2023 with reference to the decadal mean of November (2013-22) is presented in Fig 3.24 for the Madhya Pradesh State.

However, monsoon rainfall in the year 2023 is 23% percent less than 2022 even though rise in the water levels is observed in about 54.86% of wells and fall in 45.14% wells. About 75.55% of wells spreading in many districts in patches show a rise in water level up to 2 m. About 16.93% of the wells show a rise in the order of 2- 4 m and is found in patches only. Rise in water level of more than 4 m is found in about 7.52% of the wells and are seen in patches in north and western part and north eastern parts of the state. The large contribution in average water level fall comes from Siddhi (87.10%), Guna (86.36%) and Ashoknagar District (76.47%). Water level decline up to 2 m is recorded in about 72.95% of wells spread in eastern and northern parts of the state. About 16.19% of the wells show a decline in the order of 2-4 m and 10.86% in the order of more than 4m, mostly spread in Morena, Gwalior, Raisen, Jabalpur, Bhopal and Vidisha and in patches in many districts. Decline in water level is well corroborated with less rainfall in the corresponding district (**Annexure-XVIII**).

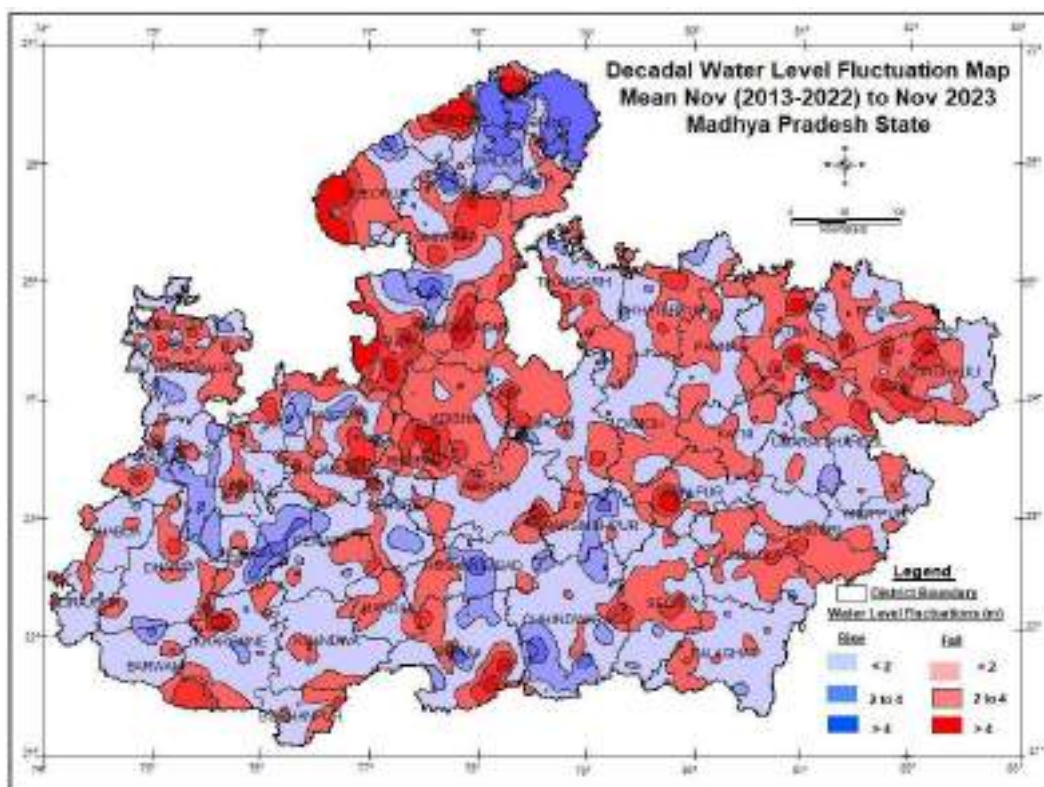

Fig: 3.24 Water Level Fluctuation Decadal Mean (Nov 2013-Nov 2022) to Nov 2023

3.4.4 WATER LEVEL FLUCTUATION MEAN (JANUARY 2014-2023) TO JANUARY 2024

Out of 718 wells that have registered rise in water level, water level rise of less than 2 m is recorded in 70.61% wells, 2 to 4 m in 18.52% wells and more than 4 m in 10.86% of the wells. Water level fall of less than 2 m is seen in all the districts, significantly in Khandwa, Burhanpur, Barwani, Khargone district in more than 74.76% of the wells. Water level fall of 2 to 4 m is observed mainly in Chhindwara, Jabalpur, Khargone, Barwani District. In 17.48% of wells and fall of more than 4 m is significantly observed in Bhind, Morena, Gwalior, Satna in 7.77% of wells. Out of the 412 wells that have registered fall in water level, 74.76% have recorded fall of less than 2m while 17.48% in the range of 2 to 4 m and remaining 7.77% wells registered water level fall of more than 4 m. Fall of less than 2 m is observed in all districts mainly in parts of Singrauli, Rewa, Sidhi, Ashoknagar, Rajgarh. Fall of 2 to 4 m, recorded in Rewa, Shivpuri, Guna, Rajgarh districts. Fall beyond 4 m is recorded mainly in Sheopur, Morena, Rewa, Rajgarh districts (**Fig 3.25 and 3.24**) (**Annexure-XIX**).

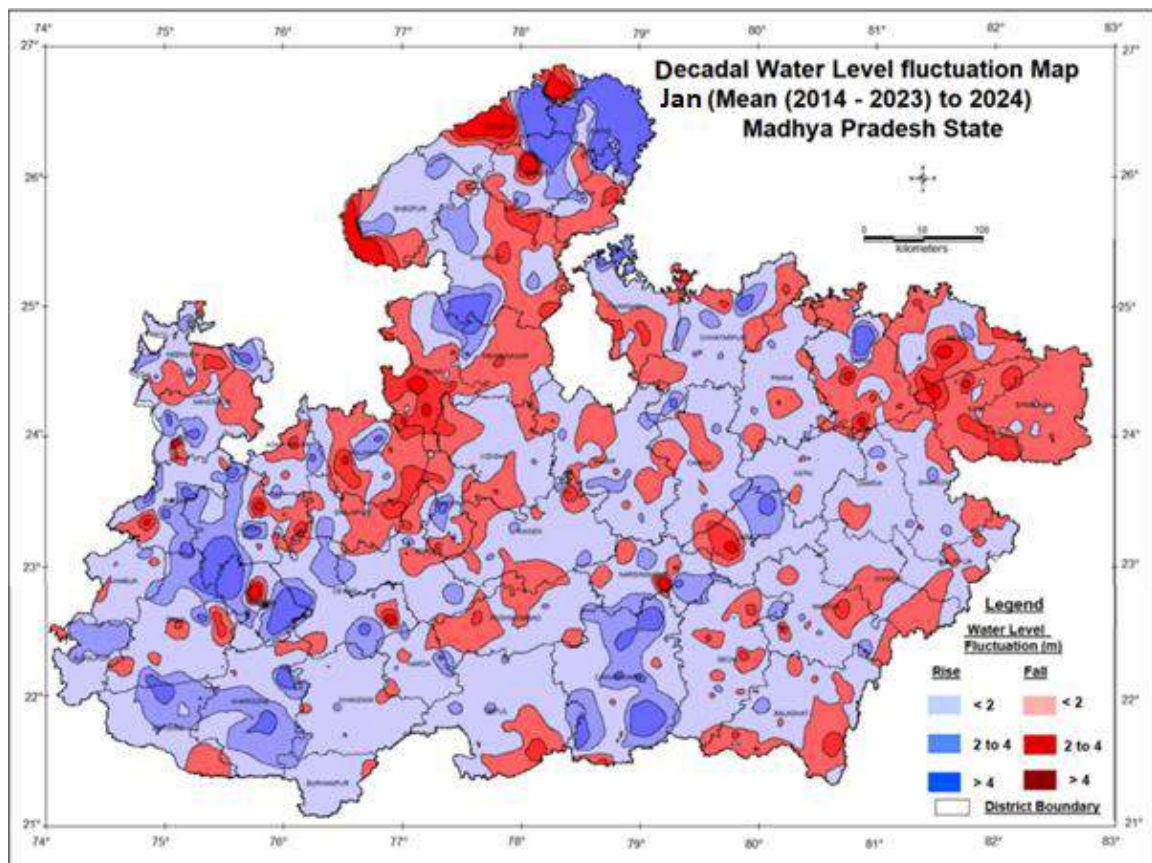

Fig: 3.25 Water Level Fluctuation Decadal Mean (Jan 2014-Jan 2023) to Jan 2024

Fig: 3.27 Water Level Fluctuation Decadal Mean at a Glance

3.5 LONGTERM TREND OF GROUND WATER LEVELS

The trend analysis of depth to ground water levels (time series analysis) using the data from the hydrograph network stations for the past one decade 2014-23 was carried out using the least square method. Based on this analysis, maps are prepared demarcating various zones of rising and declining trends for the decade 2014-23. The decadal water level fluctuation maps of different period have been depicted in **Figure 3.28 to Figure 3.29**

3.5.1 GROUND WATER LEVELS TREND PRE-MONSOON (May 2014 to May 2023)

Ground water levels trend map of pre-monsoon period in Madhya Pradesh state has been depicted in Figure-3.18. The Map shows a general rising trend and declining trend of less than 0.3 m/year of ground water levels during the past decade in most of the districts of the state. The rising trend more than 0.3 m/year has been observed in a small pocket in Barwani, Khargone, Dhar, Mandasaur, Neemuch, Sheopur, Shivpuri, Narsinghpur, Damoh, Balaghat, Damoh, Betul, Vidisha, Seoni, Rewa and etc. Declining trend at a rate less than 0.3 m/year is observed in patches in many parts of the state and declining trend at a rate (>0.3 m/year) has been observed in the form of small extent patches in the districts mainly in Guna and Rajgarh districts. The declining trend of pre-monsoon water levels reflects the ground water developmental activities in an area, whereas the rising trend indicates that either the developmental activities have reduced, or, recharge due to sources other than the rainfall, such as applied irrigation has increased.

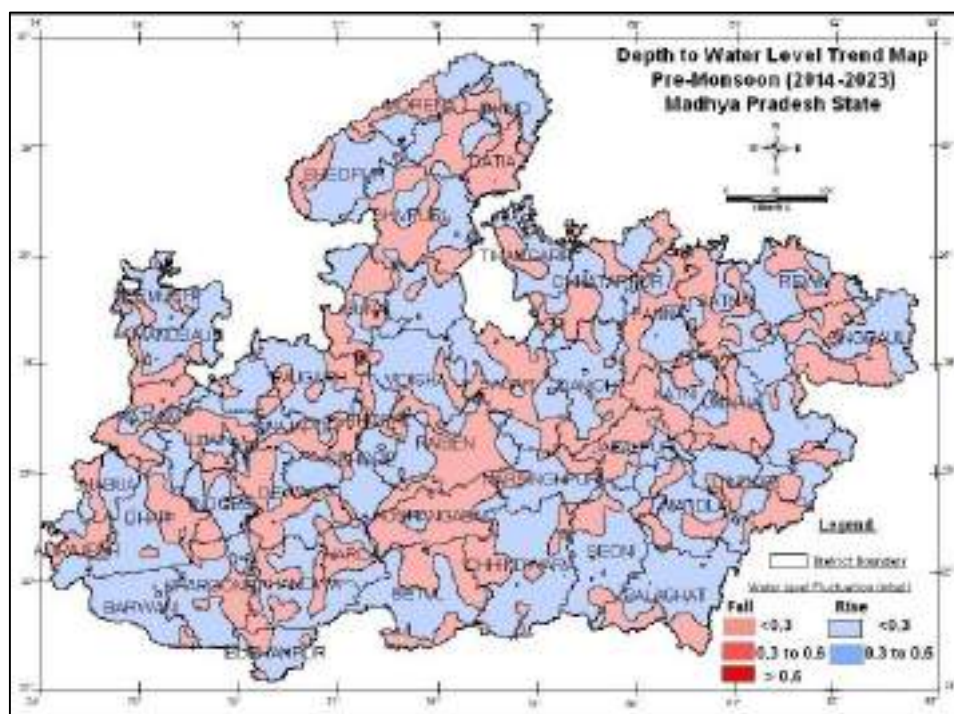

Fig: 3.28 Ground Water Level Trend from May 2014 to May 2023

3.5.2 GROUND WATER LEVELS TREND POST MONSOON (November 2014 to November 2023)

Ground water levels trend map of post-monsoon period (Nov 2014 to Nov 2023) in Madhya Pradesh state has been depicted in Figure-3.29. Like pre-monsoon ground water levels trend, post-monsoon trend (Nov 2014 to Nov 2023) shows that there is a general rising trend as well as declining trend of less than 0.3 m/year of ground water levels during the past decade in most of the districts of the state. Post monsoon depth to water level rising trend is most prominent over western part of Madhya Pradesh as compared to eastern part. Rising ground water level trend in the range of 0.3 to 0.6 m/yr is observed in few place only. Post monsoon depth to water level declining trend is most prominent over east Madhya Pradesh as compared to west. Depth to water level declining trend less than 0.3 m/yr is more prominent towards east and north part of the state and Alirajpur, Barwani, Dhar, Khargone, Khandwa, Burhanpur and Jhabua of Western part of the state. The declining trend in post-monsoon water levels suggests that a part of the aquifer is being dewatered every year, due either to deficient rainfall or to developmental activities. The rising post- monsoon trend, on the other hand, shows that additional water is being stored in the aquifer, due either to increased rainfall or due to seepage through applied irrigation.

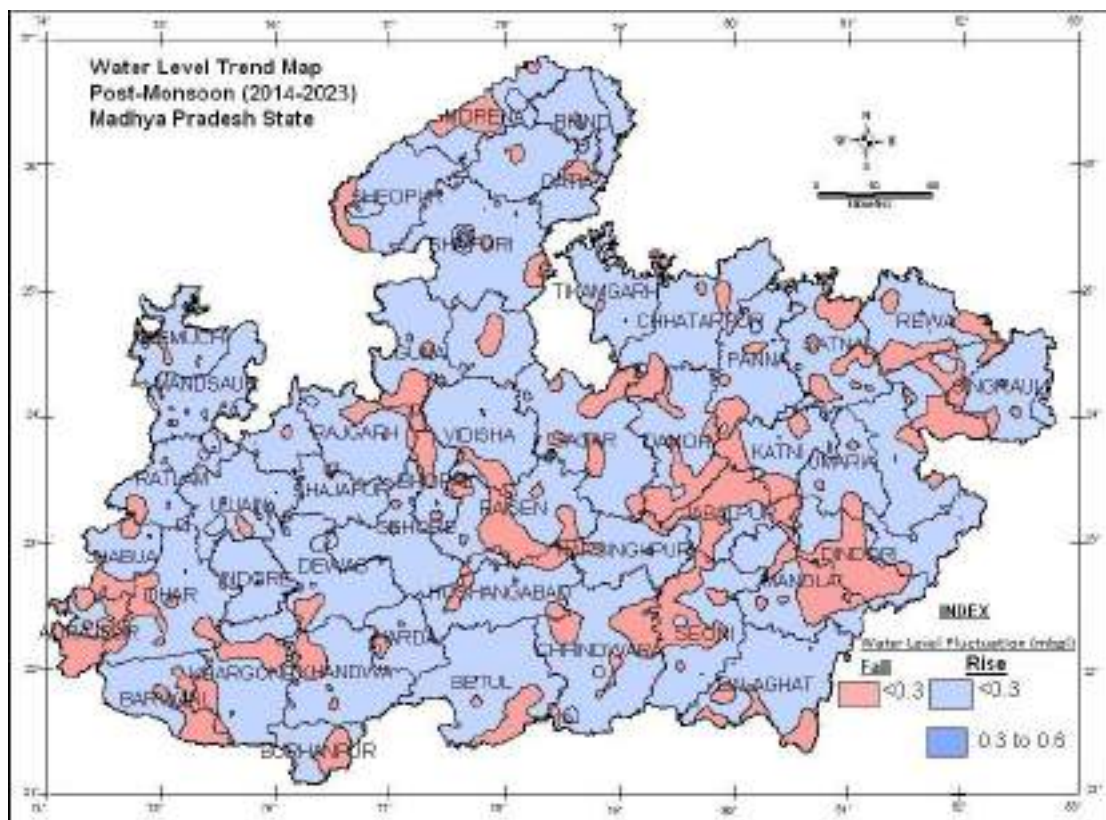

Fig: 3.29 Ground Water Level Trend from Nov 2014 to Nov 2023

3.6 DEPTH TO WATER LEVELS (Confined/Semi-Confined)

3.6.1 DEPTH TO WATER LEVELS (May, 2023)

Analysis of piezometric level data of 240 wells shows piezometric levels vary between 1.09 m bgl (Betul district) to 99.75 m bgl (Mandsaur district). Piezometric level between 0-2 m bgl observed in 0.83 % wll of the wells, between 2 to 5 m bgl in 3.75% of wells, between 5 to 10 m bgl in 18.75% of wells, between 10 to 20 m bgl in 40% of wells, between 20-40 m bgl in 23.33% of wells and piezometric level more than 40 m bgl is registered in 13.34% of wells. Shallow piezometric level of 2 to 5 mbgl is found mainly in eastern and southern districts like Sidhi, Betul, Damoh.

18.75% area of the state is covered by depth to piezometric level of 5 to 10 m bgl in Ashoknagar, Tikamgarh, Singrauli, Sidhi, Shadol, Umaria, Balaghat, Raisen districts. Piezometric level of 10 to 20 m bgl is covered in 40% of the state area and observed in maximum district. It is mainly observed in Katni, Hosangabad, Narsinghpur, Betul, and Neemuch districts. Deeper piezometric levels of 20-40 m mainly observed in central, western and south-western districts like Sheopur, Guna, Dewas, Khandwa, Harda, Ratlam, Barwani, Chhindwara districts. Deeper Water level of > 40 m bgl is found in Central and Western regions covering districts of Vidisha, Khandwa, Dewas, Dhar, Neemuch, Mandsaur, Ujjain Districts (Fig 3.30) (Annexure-XX).

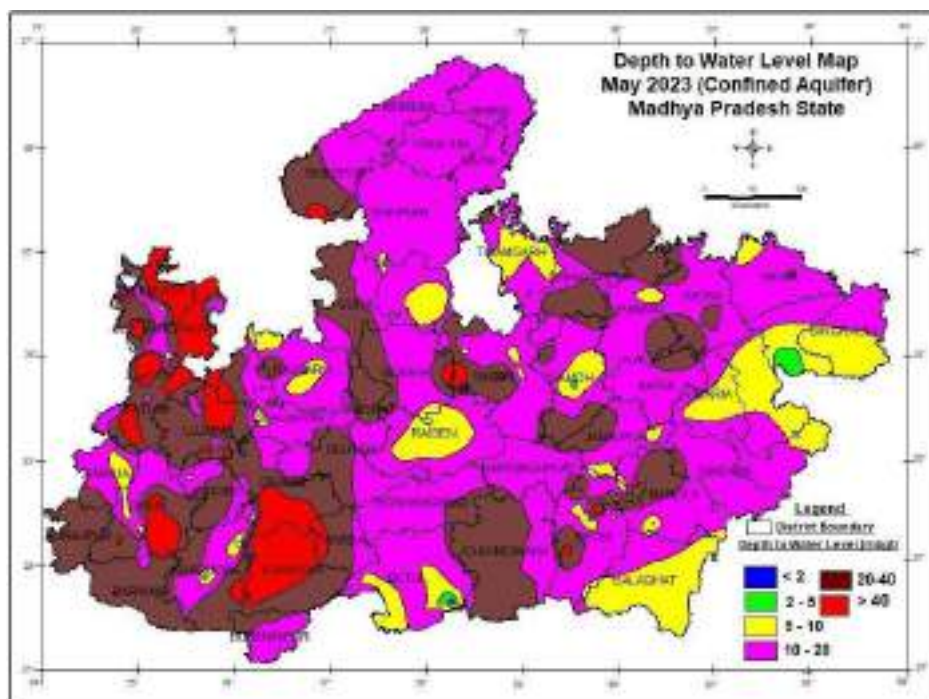

Fig: 3.30 Depth to Water Level Map (Confined/Semi-confined) of Madhya Pradesh, May- 2023

3.6.2 DEPTH TO WATER LEVELS (Aug, 2023)

Analysis of piezometric level data of 257 wells shows piezometric levels vary between 0.19 mbgl (Seoni District) to 77.17 mbgl (Sagar district). Piezometric level between 0 to 2 mbgl in 7.39% of the wells, between 2 to 5 m bgl in 19.84% of wells, between 5 to 10 m bgl in 28.4% of wells, between 10 to 20 m bgl in 28.4% of wells, between 20-40 m bgl in 10.51% of wells and piezometric level more than 40 m bgl is observed in 5.45% of wells. Shallow piezometric level of 0-5 mbgl in deeper aquifer is observed in districts of Rewa, Singrauli, Balaghat, Ashoknagar, Sehore, Dewas, Umaria and Raisen. 28 % area of the State is covered by depth to piezometric level of 5 to 10 m bgl with zones in all the part of the State mainly in Morena, Gwalior, Shivpuri, Rajgarh, Hosangabad, Rajgarh, Rewa, Dhar and Narsinghpur districts. Piezometric level of 10 to 20 m bgl is observed in maximum district. It is mainly observed in Bhind, Datia, Shivpuri, Panna, Satna, Khandwa, Barwani, Neemuch, Guna, Alirajpur, Sheopur and Mandsaur. Deeper piezometric levels of 20-40 m mainly observed in Central, Western and South-Western Districts like Sheopur Shajapur, Burhanpur, Betul, Chhindwara district. Deeper Water level of more than 40 m bgl is found in Central and Western regions covering districts of Chhindwara, Seoni, Sagar, Sheopur etc (**Fig 3.31and 3.32**) (**Annexure-XXI**).

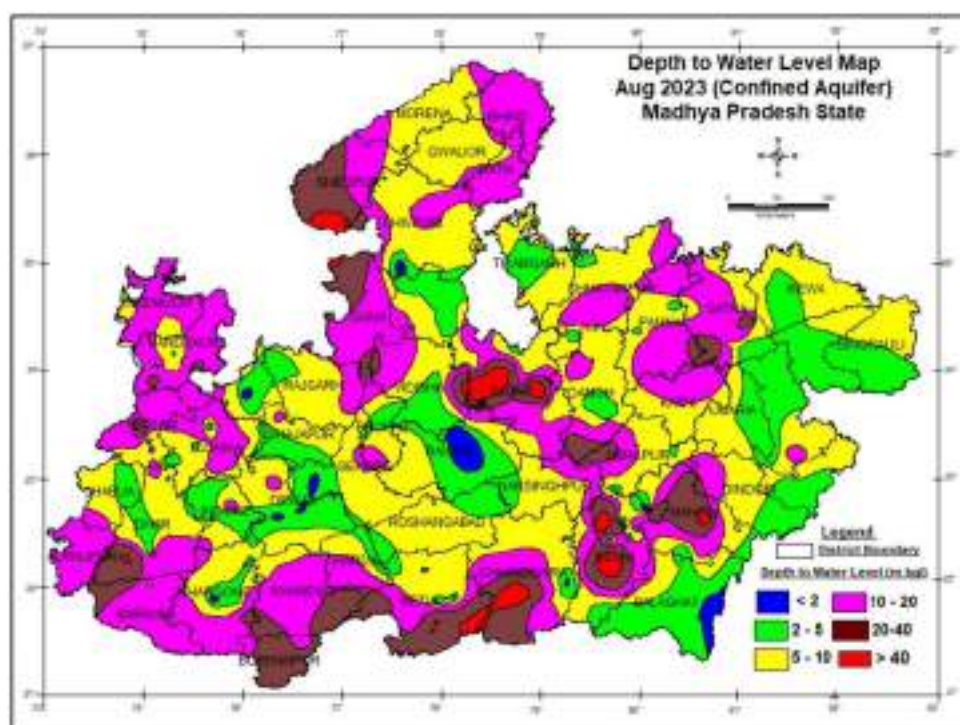

Fig: 3.31 Depth to Water Level Map (Confined/Semi-confined) of Madhya Pradesh, Aug- 2023

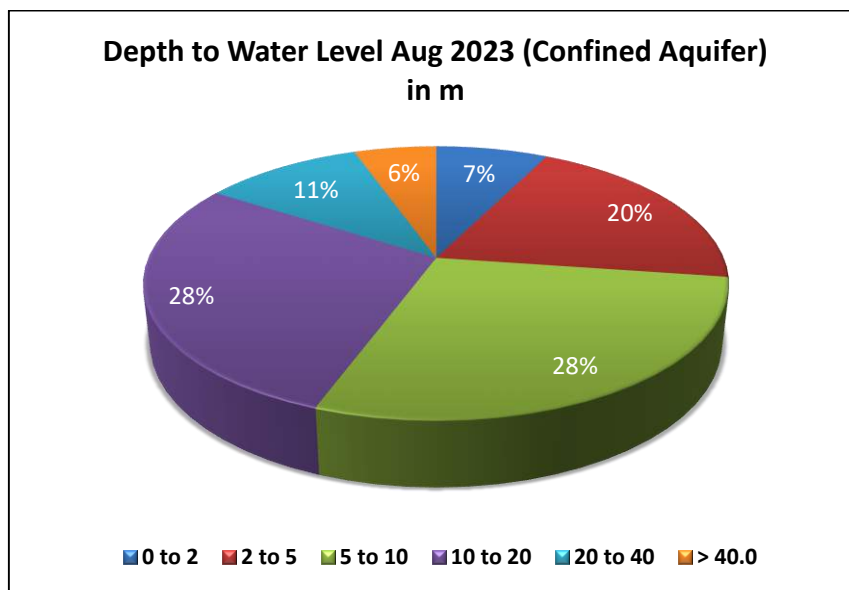

Fig: 3.32: Depth to Water Level Map Confined Aquifer Graph, Aug 2023

3.6.3 DEPTH TO WATER LEVELS (Nov, 2023)

Analysis of piezometric level data of 226 wells shows piezometric levels vary between 0.4 mbgl (Mandsaur district) to 82.18 mbgl (Sagar). Piezometric level <2m bgl in 3.54% wells, between 2 to 5 m bgl in 19.47% of wells, between 5 to 10 m bgl in 29.20% of wells, between 10 to 20 m bgl in 26.99% of wells, between 20- 40 m bgl in 14.60% of wells and piezometric level more than 40 m bgl is observed in 6.19% of wells. Shallow piezometric level of 2 to 5 mbgl is found mainly in Central and South western districts like Raisen, Seoni, Balaghat, Sidhi, Mandla. The Shallow water level in deeper aquifer is also observed in Jhabua and Khargone in North-eastern districts and in Bhopal and Ashoknagar districts. 29.20 % area of the State is covered by depth to piezometric level of 5 to 10 m bgl with zones in all the part of the State mainly in North-western districts like Singrauli, Sidhi, Shahdol, Umaria and Anuppur. 5-10 mbgl Water Level is also found in Raisen, Balaghat, Seoni, Jhabua, Ashoknagar and Tikamgarh districts. Piezometric level of 10 to 20 m bgl is covered in 26.99% of the State area and observed in Maximum district. It is mainly observed in Shivpuri, Bhind, Morena, Chhatarpur, Shivpuri, Dhar district. Deeper piezometric levels of 20-40 m mainly observed in Western and South-Western Districts like Khandwa, Burhanpur, Harda, Ratlam and Chhindwara district. Deeper Water level of more than 40 m bgl is found in Central and Northern regions covering districts of Sagar, Sheopur, Mandla and Chhindwara Districts (**Fig 3.33**) (**Annexure-XXII**).

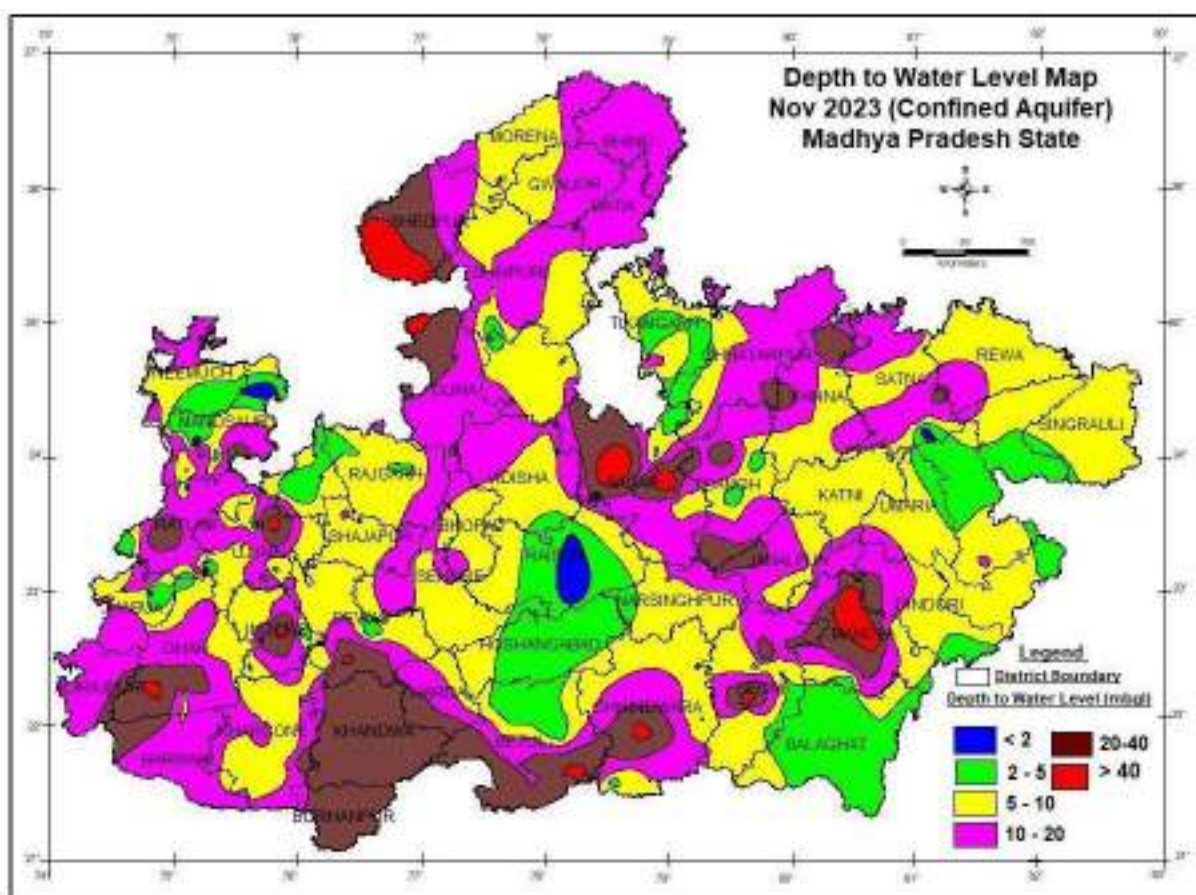

Fig: 3.33 Depth to Water Level Map (Confined/Semi-confined) of Madhya Pradesh, Nov- 2023

3.6.4 DEPTH TO WATER LEVELS (January, 2024)

Analysis of piezometric level data of 219 wells shows piezometric levels vary between 0.32 m bgl (Dhardistrict) to 99.45 m bgl (Ratlam district). Piezometric level between 0 to 2 m bgl in 1.89% of wells, between 2 to 5 m bgl in 17.97% of wells, between 10 to 20 m bgl in 23.26% of wells, between 20-40 m bgl in 16.32 % of wells and piezometric level more than 40 m bgl is registered in 8.63% of wells. 31.92% area of the state is covered by depth to piezometric level of 5 to 10 m bgl in Singrauli, Rewa, Sidhi, Shahdol, Anuppur, Dindori, Umaria, Hoshangabad, Raisen, Ashoknagar, Khargone, Barwani, Bhopal districts. Piezometric level of 10 to 20 m bgl is covered in 23.96% of the state area and observed in maximum districts. It is mainly observed in Sheopur, Shivpuri, Bhind, Morena, Datia districts. Deeper piezometric levels of 20-40 m mainly observed in central, western and south- western districts like Sheopur, Guna, Khandwa, Burhanpur, Alirajpur, Jhabua, Vidisha, Mandla, Chhindwara, Betul districts. Deeper Water level of > 40 m bgl is found in Central and Western regions covering districts of Sagar, Sheopur, Mandla, Dhar, Ujjain, Ratlam, Panna, Guna (**Fig 3.34 and 3.35**) (**Annexure-XXIII**).

4. HYDROGRAPH

Hydrograph is a graph showing how the water level behaving over a period of particular time. The water level varies over the last 10 years from 2014 -2023 shows for some locations, how water level is behaving in the Madhya Pradesh In some of the locations the water level trend shows the declining trend and at some locations it shows the falling trend for pre-monsoon, Post-monsoon and annual water level. The last 10 years water level trend for Bhopal, Gwalior, Jabalpur, Indore, Burhanpur, Singrauli and Neemuch districts are given below.

ACKNOWLEDGMENT

I am highly grateful to every respected personality who guided, inspired, encouraged and accentuated my knowledge.

I would like to take an opportunity to thank Shri Ashok Kumar Biswal, Regional Director, CGWB, NCR, Bhopal for guiding and providing all the necessary facilities to complete this report.

I would like to thank to all the officers and officials for carrying out NHS monitoring in the year 2023-24 in the Madhya Pradesh.

I would like to thank to all the Young Professional for helping in preparation of the Ground Water Year Book.

I am also grateful to all the officers and officials for cooperating, sharing their academic and technical knowledge, valuable suggestions and filed experiences which helped in the successful completion of this report.
